BrightStars

SCHOOL PLATFORM GUIDE
EDITION 2026 · V2.23

FOR PROPRIETORS, HEADS & SCHOOL BOARDS

One platform. Every school *its own.*

Entrance exams, admissions, results, report cards, attendance, fees, online payments, the school store, the library and parent updates. All of it in one place, under your school's own name, in your own colours, on your own web address.

Admissions to graduation

BUILT FOR NIGERIAN SCHOOLS

WELCOME

A calmer way to run a school.

Brightstars Academics is a complete school management platform built for Nigerian primary, junior and senior secondary schools. It replaces the spreadsheets, receipt books, notice boards and phone calls a school runs on with **one connected system**. A mark a teacher enters becomes a report card a parent opens. A payment the bursar records becomes a receipt on the parent's phone within moments.

This guide explains what the platform does, how each part works, and why schools choose it over spreadsheets, paperwork and other school software.

4

Portals in one: **staff, students, parents** and entrance **candidates**

15+

Connected modules, from **entrance exams** to the **school store**

100+

Named permissions, so each person sees **only what their job needs**

19

Ready-made staff roles, from **Head Teacher** to **Store Keeper**

255

Standard entrance questions included, so **exams can run on day one**

1

Private database for **each school**. Never shared with another school

0

Brightstars logos on your portal. **Your brand only**

24/7

Access on phone, tablet or computer. **Installs as an app**

DOES THIS SOUND FAMILIAR?

Running a school shouldn't feel like running after paper.

Most schools are held together by spreadsheets, notebooks and phone calls. It works until term ends, exam day arrives, or a parent asks a simple question.

Results live in spreadsheets

Marks are typed, retyped and added up by hand. One wrong cell and a child's grade is wrong. Nobody is sure which copy is the latest.

Receipts written by hand

Books run out, handwriting is hard to read, and "did we ever receive this payment?" takes an afternoon to answer.

Parents keep phoning

"Are the results out?" "What do I still owe?" The same questions every term, and every answer costs someone's time.

Exam day is a scramble

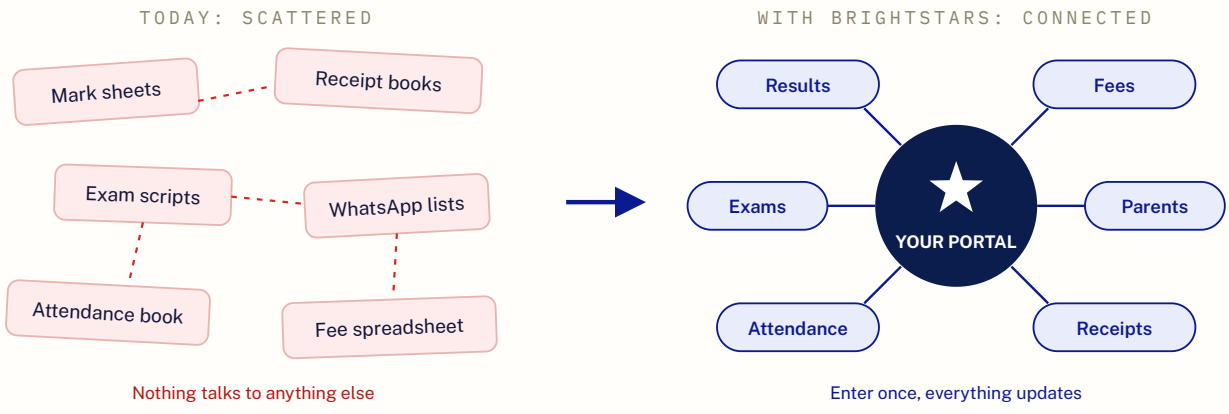

Printing papers, invigilating, marking by hand, ranking on a calculator, and hoping no script gets lost.

Everyone can see everything

When one login opens every record, a mistake or a curious visitor can reach children's information they should never see.

Software that isn't yours

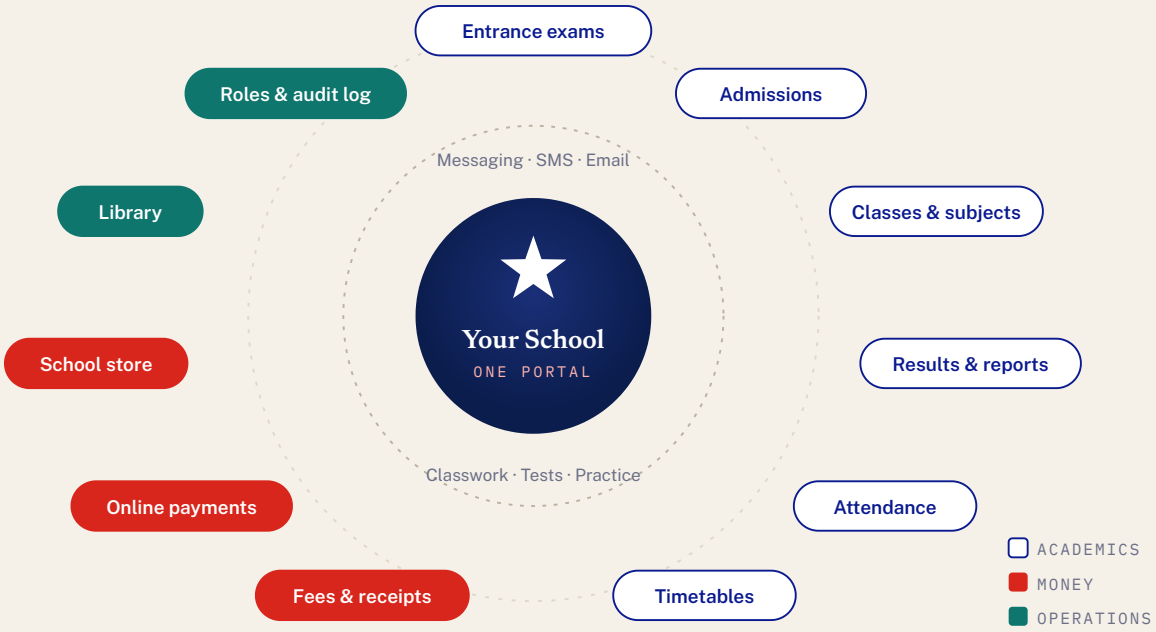

Generic systems carry someone else's name and colours. Your parents want to see *your* school.

WHAT YOU GET

Everything a school runs on, in one place.

Not eight separate tools that don't talk to each other, but one system with two workspaces, **School Portal** and **Entrance Examination**, and a portal of its own for every person in the school community.

Staff portal

Proprietor, head, teachers, bursar, librarian and office, each seeing only their own menu.

Student portal

Assignments, tests, exams, practice, timetable, attendance, results and report cards.

Parent portal

Every child in one place: fees, results, report cards, attendance, messages and the store.

Candidate portal

Entrance candidates sign in, sit timed papers and see their result once the school releases it.

WORKSPACE 1

School Portal

The everyday running of the school: students, parents, teachers, classes, subjects, attendance, academics, timetables, report cards, promotion, finance, the store, the library and settings.

WORKSPACE 2

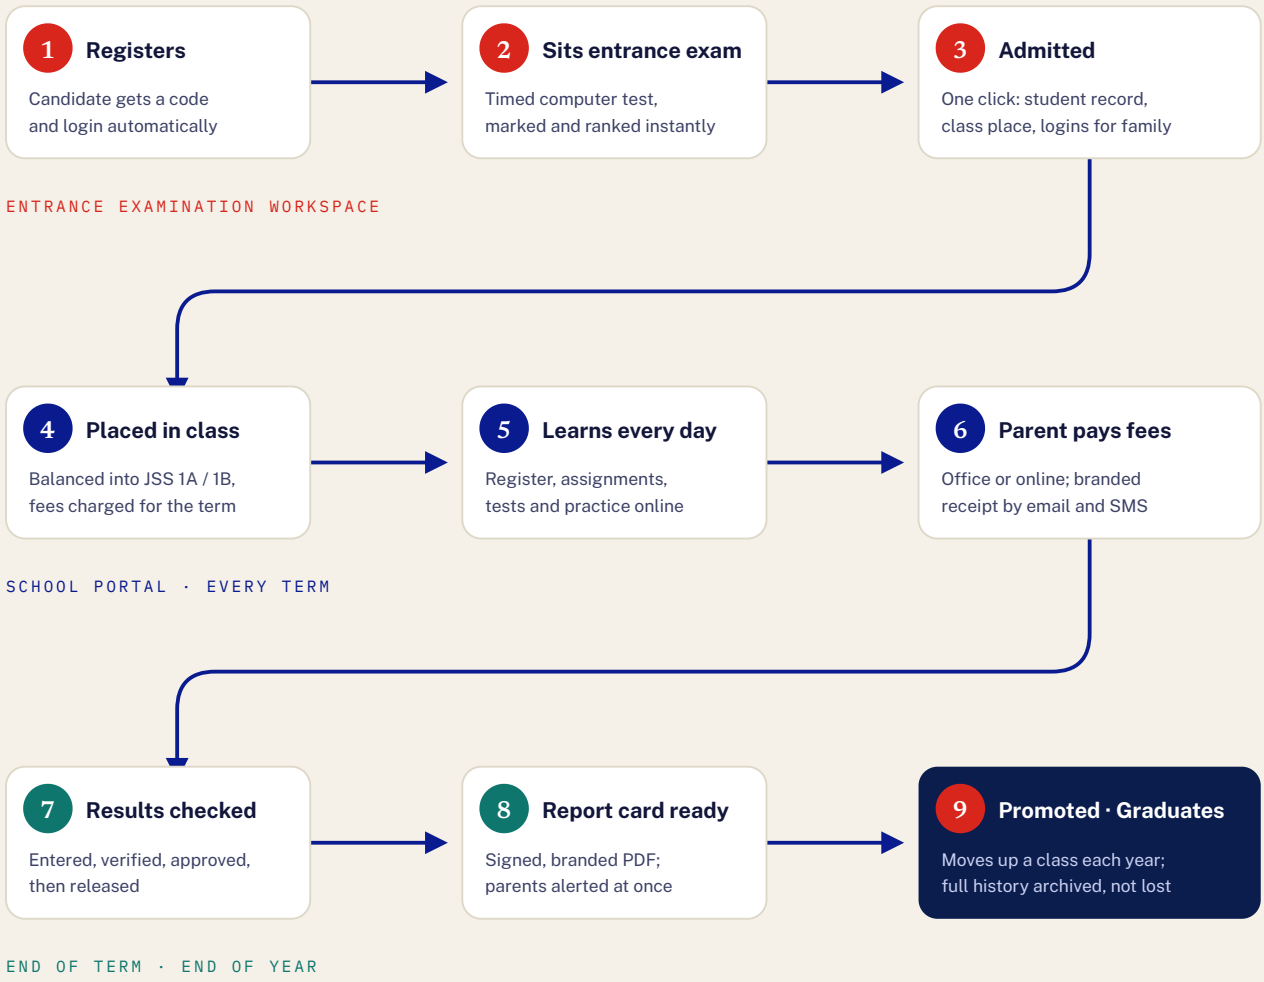

Entrance Examination

Everything for admissions season: candidates, question banks, exam configuration, results by subject, rankings, admissions and the public practice page.

HOW IT ALL FITS TOGETHER

A student's journey, start to finish.

Follow one child through the platform. Each step feeds the next automatically, so nothing is typed twice and nothing falls through the cracks.

> The admitted candidate becomes a real student with a class, a login, a fee account and a parent account in one action. No re-typing names into a second system.

Hours back every term

Marking, ranking, adding up results, writing receipts and building report cards are done by the system, not by staff after hours.

One version of the truth

Every screen, card and receipt is worked out from the same records, so the numbers can never disagree with each other.

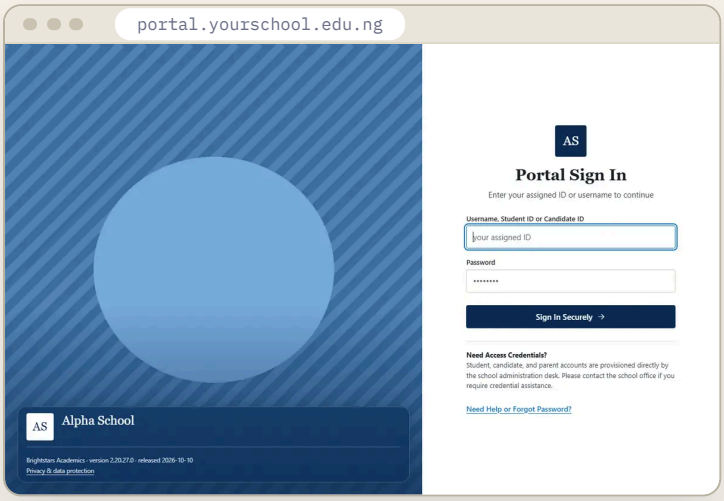

Families in the loop

At steps 6 and 8, and whenever work or fees are set, parents are told automatically. Nobody has to remember to send a message.

YOUR SCHOOL, YOUR NAME

It looks like your school, because it is.

Many platforms make every school look the same, with the vendor's logo in the corner. Brightstars works the other way round. Parents and students see **your** name, logo, colours and photographs on every page, every receipt and every report card. The Brightstars logo never appears on your portal.

The school's own sign-in page, with its logo, name and up to eight school photographs fading one into the next.

- **Your own web address,** live the moment your school is created, such as `yourschool.brightstars`…. Use your own domain (for example `portal.yourschool.edu.ng`) whenever you're ready.
- **Your logo, name, motto and tagline** on the portal, report cards and receipts.
- **Your two brand colours** on menus, headers, buttons and the sign-in page. A colour too light to read is refused automatically, so the portal always stays legible.
- **Up to eight photographs** of your school on the sign-in page.
- **Messages from your own accounts.** Email and SMS go out under your school's name, so parents know who is writing.
- **Your own numbering.** You decide how admission numbers and candidate codes look, for example `ABC/2026/0143`.

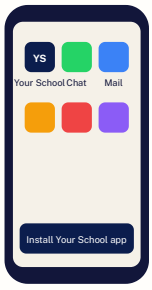

THREE SCHOOLS, ONE PLATFORM

Greenfield College

Royal Crest Academy

Your School

Each school appears in its own colours, on its own address. Sample names.

Installs as an app

Parents, students and staff can install the portal on a phone, tablet or computer. The app icon is **your** logo and the app name is **your** school. No app-store listing needed.

EVERYWHERE IT MATTERS

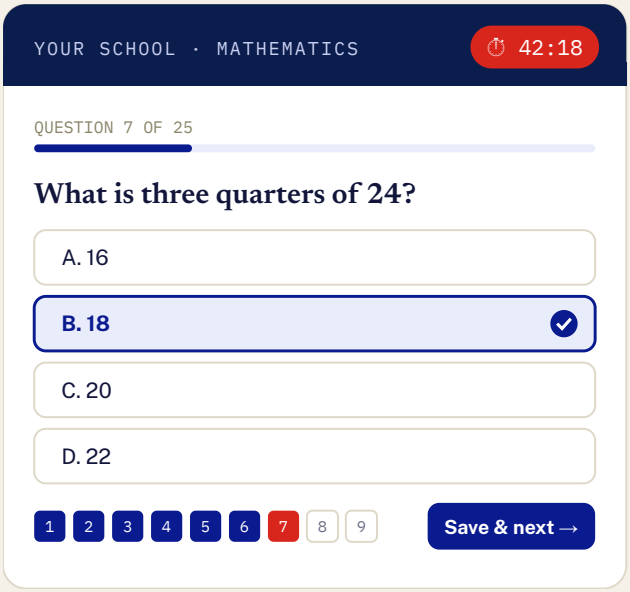

Your identity on every document

- Sign-in page
- Every menu
- Report cards
- Receipts
- Exam timetable PDF
- Emails & SMS
- Installed app
- Candidate results

ENTRANCE EXAMINATIONS

Admissions day without the paperwork.

Candidates sit their papers on a computer with a countdown clock. When they finish, every paper is already marked and the ranking is already done. No scripts to collect, no marking marathon, no calculator.

What a candidate sees: one question at a time, a server-kept clock, and a map of answered questions.

- **Marked instantly.** No arithmetic mistakes and no lost scripts. Rankings by subject and overall are ready the moment the last candidate finishes.
- **Fair by design.** Each candidate gets the questions in a different order. The clock is kept by the server, not by the candidate's device, so nobody can stop time.
- **Nothing lost mid-exam.** Every answer is saved as the candidate presses Save & Next. If power or the network drops, the candidate carries on where they were, and up to five minutes of lost time is given back.
- **Start with ours, or bring yours.** Every school starts with **255 standard questions** (Mathematics, English and General Knowledge for Year 7/JSS 1 and SSS 1), checked by an independent reviewer. Import your own banks whenever you like.
- **SSS departments.** SSS 1 candidates choose Science, Art or Commercial when they register.
- **Exams can't be changed after they're sat.** Each attempt keeps its own copy of the questions, and banks can be locked during a live exam.
- **Retakes when needed,** granted by authorised staff, and results exported to CSV.

A free practice link that markets your school

Families visit your school's own practice page with no sign-up, choose the class they're aiming for, and practise. Questions come from last year's paper or a practice bank you set. The paper about to be sat is never shown. Every family who practises meets your school's brand first.

```
yourschool…/entrance-practice
→ Year 7 / JSS 1
→ Year 10 / SSS 1
```

ENTRANCE EXAM DAY, BEFORE AND AFTER

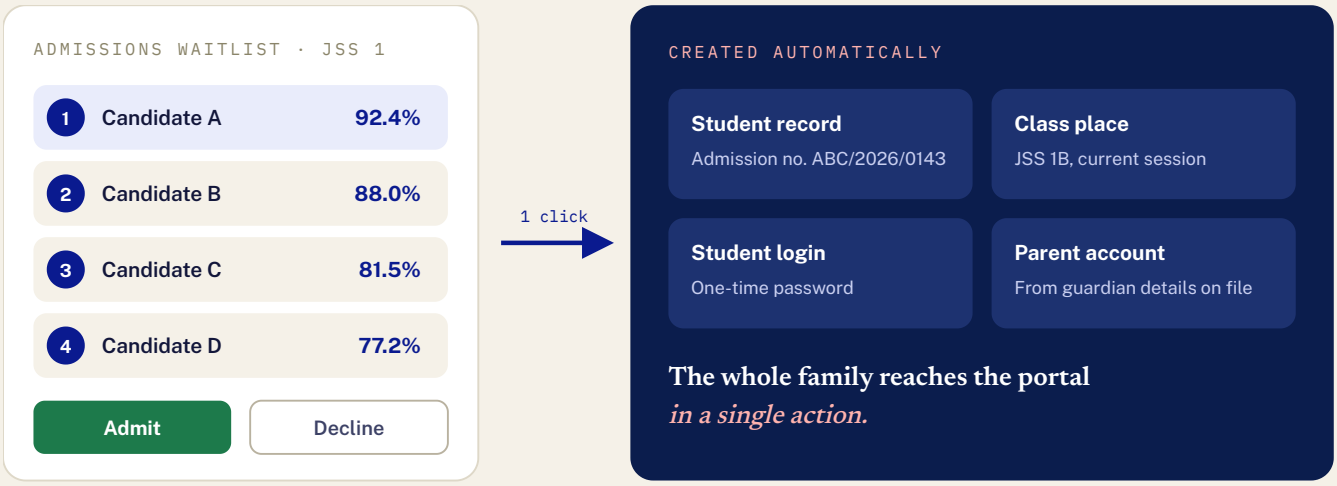

On paper	Print papers	Invigilate	Collect scripts	Mark by hand	Add up	Rank	Type results
Brightstars	Candidates sit the paper online			Marked, ranked and ready the moment they finish			

SEVEN MANUAL STEPS BECOME ONE

ADMISSIONS & CLASS PLACEMENT

From ranked waitlist to enrolled student in one decision.

Every candidate who sits at least one paper joins a waitlist ranked by overall percentage. Your admissions officer admits or declines from there, and one click creates everything a new student needs.

Decisions stay private

Admitting a candidate doesn't show them a score. An admin must release the result before the candidate sees their outcome or new login.

The right person decides

Only the Admissions Officer role sees the waitlist by default, and it can be limited to one entry level. Admitting is final. Declining can be undone.

Balanced classes, automatically

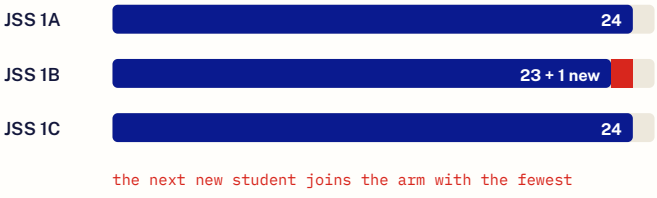

Split JSS and SSS classes into arms such as JSS 1A, 1B or SS 1A (Science). New students go to the arm with the fewest students.

Class transfers with approval

A class teacher can ask to move a student to another arm, or in SSS to another department. Nothing changes until the receiving class teacher (or the head) approves it.

Three ways in, one record

Students arrive by entrance exam, by registering one at a time, or by bulk import from your existing spreadsheets. All three produce exactly the same record.

Even class sizes without spreadsheets

Placement happens automatically when a class is split, when a student is added and when a candidate is admitted. In SSS, an arm tied to a department only takes students from that department.

RESULTS & REPORT CARDS

From marks to report card, with nobody chasing.

Teachers enter marks. The system adds them up, holds each result until the right person has checked it, and builds the report card the moment a child's term is complete.

CLASS TEACHER'S COMMENT
A focused and diligent term. Keep it up.

Class teacher

Head Teacher

Illustration of a term report card, available as a page and as a PDF.

- **Continuous assessment (40) plus exam (60),** added up the same way for every child, with grade and remark.
- **Different people check each step,** so mistakes are caught before a parent ever sees them.
- **Never incomplete.** A card appears only when every result for the term is released, so it never shows a missing mark.
- **Signed and branded:** your logo and colours, the class teacher's comment and signature, the head's signature, the class average, trait ratings and next-term date.
- **A whole class in one PDF** to print, or each card alone.
- **Parents told for you** by email, SMS and in-app alert the moment the card is ready.

THE GRADING KEY PRINTED ON EVERY CARD

FOR THE PROPRIETOR AND HEAD

The whole school at a glance.

Open the portal and the Overview answers the questions a school leader asks every morning. How are we doing this term compared with last? Who has no class teacher? How many results are ready to release? How full is the register?

The Overview of a demonstration school ("Alpha School"). All names and figures are sample data.

Term against term

Average score, attendance, marks released and work set, each compared with the previous term, with ▲ or ▼ showing which way it moved.

What needs attention

Results waiting to be released, classes with no class teacher and unallocated payments are flagged, so nothing is left sitting.

Every class in one table

Students, average, attendance, a results bar and the top student for every class, plus the attendance trend and enrolment by section.

✓ **A setup checklist guides new schools.** "Set up your school" walks you through classes, subjects, students and fee items, and ticks each step off by reading your own data. You always know what's left to do.

DAY TO DAY

Teaching, attendance and timetables.

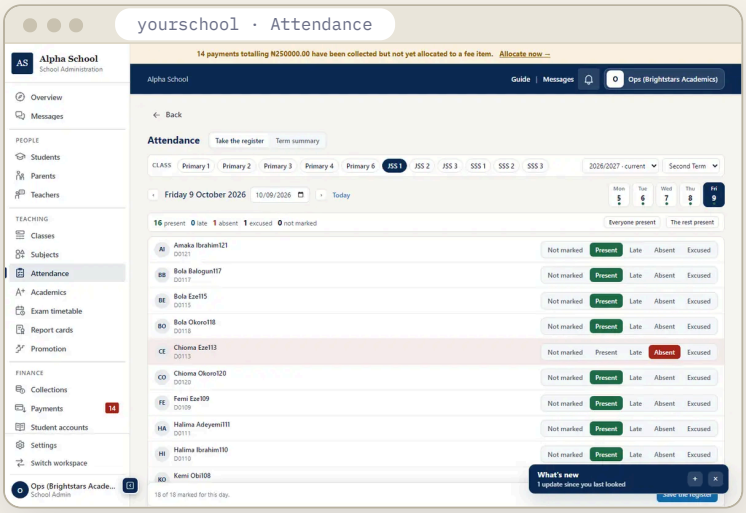

The ordinary business of a school day, done in minutes instead of hours, and visible to the families who care about it.

01
Assignments
Teachers set work, students answer online, and marks come back without anyone re-typing them.

02
Class projects
Written or quiz-style, for one student or a whole class, graded with the same care.

03
Tests & exams
The same timed, auto-marked engine as the entrance exam, used for everyday classwork.

04
Practice
Retake as often as you like, in a new order every time. Never counted towards grades.

Taking the register: one tap per child, or "Everyone present" and adjust. Demo data.

Attendance in moments

- Present, late, absent or excused for the whole class, once a day.
- Term summaries per class, with percentages.
- Parents and students see the day-by-day record on their own dashboard.

Timetables, released together

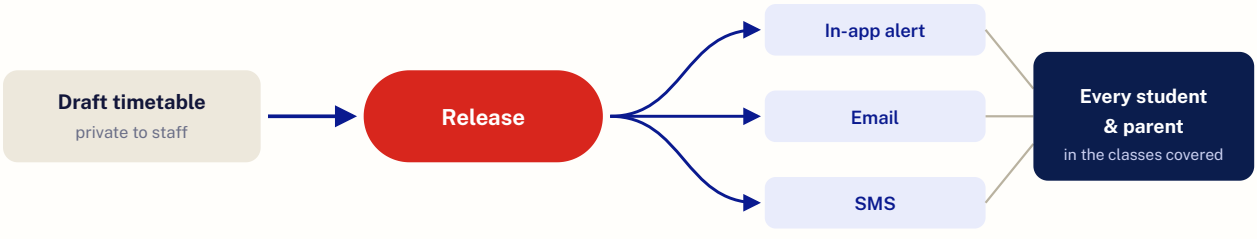

- Build the exam or test timetable as a private draft and edit it freely.
- Release it once and every affected student and parent is told by **email, SMS and in-app alert** at the same moment.
- Families download it as a PDF or print it.

Built for Nigerian schools
Crèche, Nursery, Primary, JSS and SSS, with Science, Art and Commercial departments. Subjects can be set for each department.

Early years done right
Crèche and Nursery pupils don't need logins. Teachers record scores and parents still see fees, results and report cards.

Nothing lost or counted twice
Answers are saved when a student presses Save & Next, so a dropped connection or stray tap never loses or doubles a response.

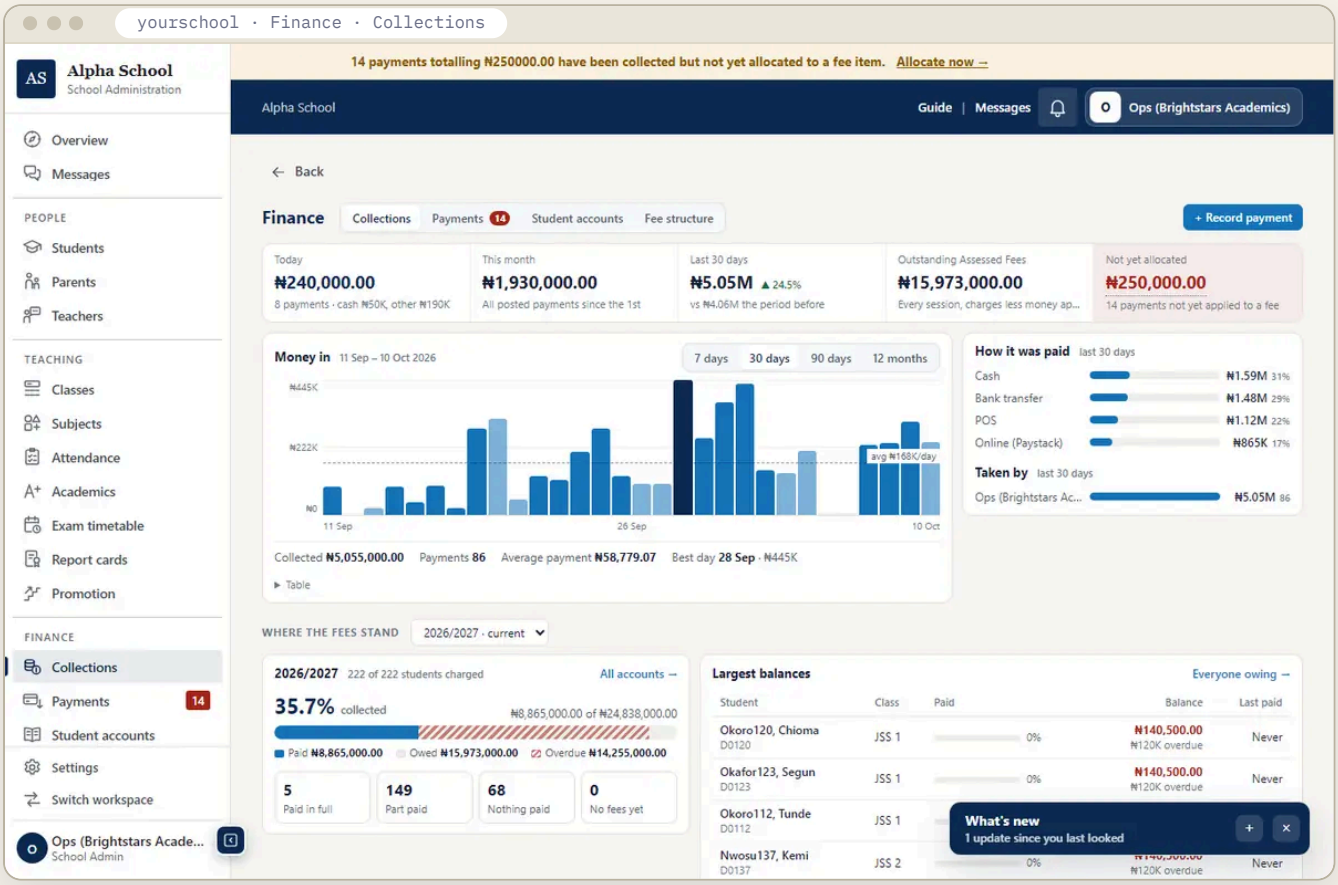

ONE RELEASE, EVERYONE TOLD

FINANCE

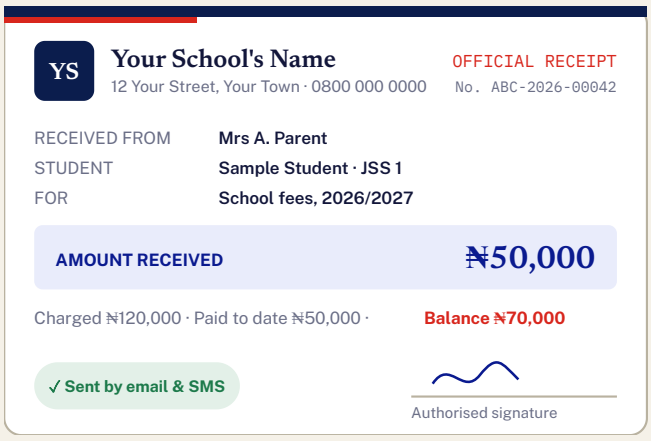

Always know who has paid, and who hasn't.

Set fees once by class and term, charge students in a few clicks, and watch collections come in live. Every payment produces a receipt in your colours that reaches the parent by itself.

Collections for a demonstration school: money in by day, payment method mix, how much of the session's fees is collected, and the largest balances. Sample figures.

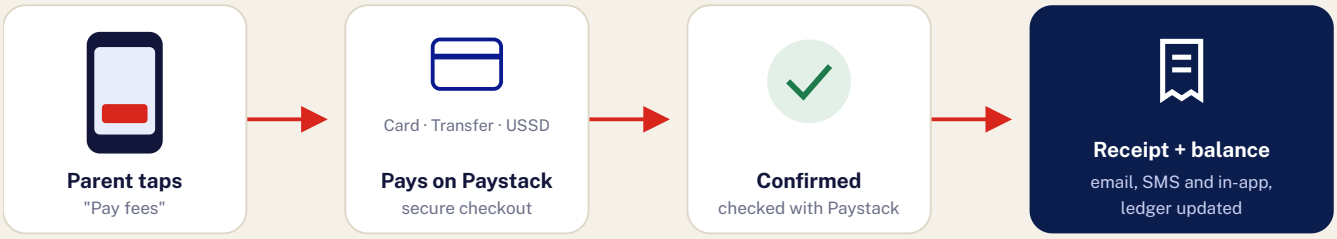

- **Fees set once, by class:** tuition, uniform, transport and more, per class and term.
- **Balances always to hand:** paid, part paid or unpaid, per fee and per child, including arrears from earlier sessions.
- **Cash, transfer, POS or online,** all recorded in one ledger.
- **Mistakes are corrected, not hidden.** A wrong payment is voided with a reason and stays on record.
- **Unallocated money is flagged** until it's applied to a fee.

PAY FEES ONLINE

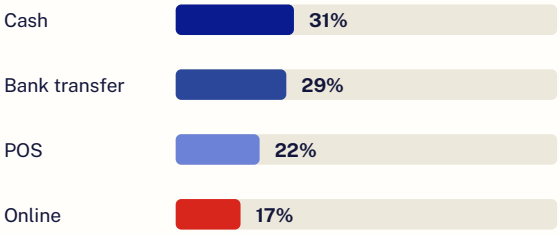

Parents pay from their phone, straight into your account.

Connect your school's own Paystack account and parents can pay any amount up to what they owe by card, bank transfer or USSD. The money goes **directly to your school**. Brightstars never holds it.

NO ONE IN THE OFFICE HAS TO DO ANYTHING

EXAMPLE: HOW A DEMONSTRATION SCHOOL WAS PAID, LAST 30 DAYS

Sample data from the demo school shown on the previous page. Every channel lands in the same ledger and produces the same receipt.

Safe by design

- **Your own Paystack account.** No shared platform account and no middleman holding your money.
- **Never trusted from a browser.** Every payment is confirmed by asking Paystack directly, even if the parent closes their phone mid-payment.
- **A double-tap never charges twice.** Repeated clicks return to the same checkout.
- **Your keys are encrypted** and never shown again once saved. Only the School Admin can connect the account.
- **Pay one fee or several at once,** and buy from the school store too.

One fee or all at once

Parents can pay a single fee, part of a balance, or several fees together in one checkout.

Confirmed even if they close the app

Paystack also notifies the school directly, so a payment is recorded even if the parent closes their browser first.

Same receipt, same ledger

An online payment looks exactly like one recorded in the office, with the same branded receipt and balance update.

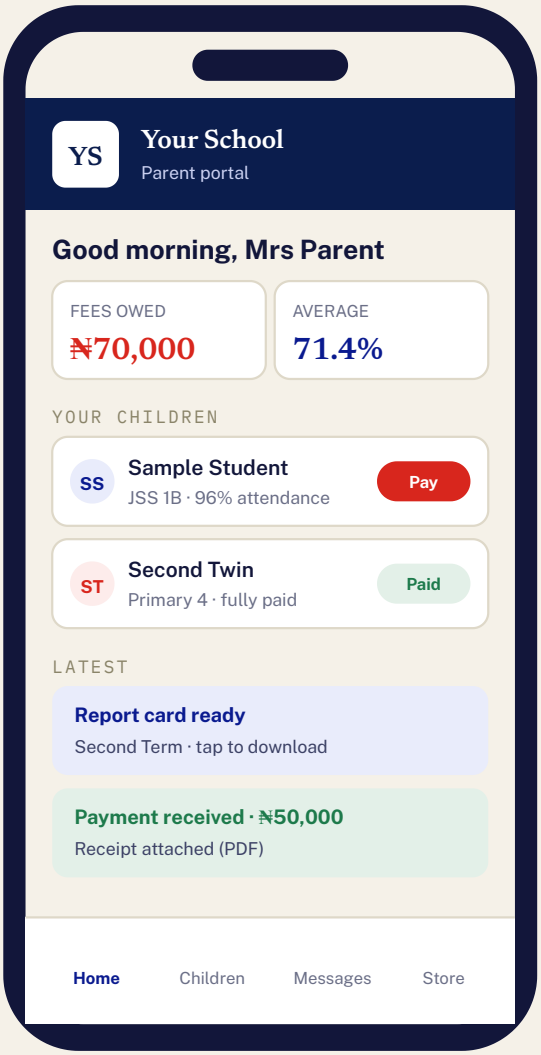

Less cash in the office. Faster collections.

Parents who can pay from their phone at 9pm don't need to queue at the bursar's window at 9am.

FOR FAMILIES

Parents stay informed without phoning the office.

One parent login covers every child. Fees, results, report cards, attendance, timetables, messages and the store are all on their phone, in your school's colours.

What parents get

- Every child in one table, showing what each owes, their average and attendance.
- Results and report cards the moment they're released, ready to download.
- Fee account by session, with receipts and online payment.
- Attendance history and the exam timetable.
- Two-way messages with the school.
- The school store, with collection texts when an item is picked up.

What students get

- Assignments, projects, tests and exams with due dates and scores.
- Unlimited practice tests that never count against them.
- Their own timetable, attendance and report cards.

SENT AUTOMATICALLY, IN YOUR SCHOOL'S NAME

When...	In-app	Email	SMS
A payment is recorded	•	• + PDF	•
A report card is ready	•	•	•
A timetable is released	•	•	•
A new fee is charged	•	•	•
New school work is set	•	•	–

SMS is used only where it matters, which keeps your SMS credit costs down.

> "Are the results out?" "What do I still owe?" The answers are on the parent's phone before they think to call.

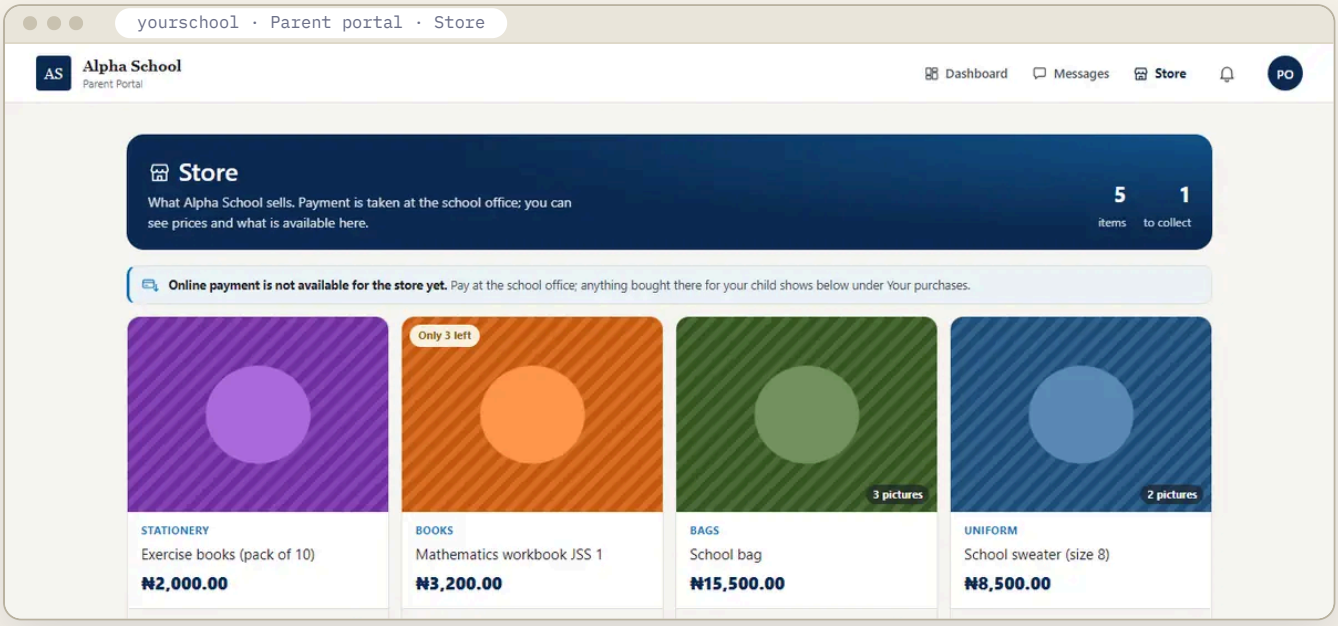

Messages, not missed calls

Parents and staff exchange messages inside the portal, and a conversation the school starts reaches the parent by SMS too.

BEYOND THE CLASSROOM

The school store and the library, included.

Uniforms, books, bags and stationery, sold and tracked in the same portal. The library knows every book, copy and loan.

The store as a parent sees it, with prices, stock and "only 3 left" or "sold out" labels. Demo data and placeholder pictures.

School store

- Inventory with prices, stock levels and up to three pictures per item.
- Parents browse and buy for any child, online where the school accepts it.
- Cash, transfer and POS sales recorded at the counter, with receipt.
- Stock goes down by itself. Low-stock and sold-out items are flagged.
- Hand-over records who collected the item and texts the parent.
- Sales this month vs last, weekly sales and best sellers on the Overview.
- A ready-made **Store Keeper** role.

Library

- A catalogue of every book and each of its copies.
- Lend to a student or a member of staff in a couple of clicks.
- See what's out, who has it, and what's overdue.
- Record returns so nobody has to remember who has what.
- A ready-made **Librarian** role.

Why it matters: fewer lost books, less cash handled informally, and money from the store that is visible and accounted for.

STAFF, ROLES & ACCOUNTABILITY

Everyone sees what their job needs, and nothing more.

No single "give them access" switch. Every sensitive action has its own named permission, access follows your school's chain of authority, and every important action is recorded.

YOUR CHAIN OF AUTHORITY, BUILT IN

PRIVATE BY DESIGN

Children's information deserves real protection.

Many school systems keep every school's records in one big shared database, separated only by a label. Brightstars is built differently. **Every school gets its own private database and its own private files.** One school can never see another's records.

Walled off, not filtered

Students, results, fees and photographs live in your school's own database, not as tagged rows in a shared table that one bug could leak.

Careful with passwords

New accounts start with a one-time password that must be changed. Repeated wrong guesses are slowed. Changing a password signs out every device.

Secrets encrypted

Your email, SMS and Paystack credentials are encrypted at rest, never shown again once saved, and kept out of activity logs.

Parents see only their children

A parent's login opens their own children's records and nothing else. A login from one school doesn't work at another.

Exams survive hiccups

Answers are saved as they're given and time is kept by the server. A restart doesn't throw a candidate out.

NDPR-aligned

A published data-protection statement aligned with Nigeria's NDPR, linked from every school's sign-in page for parents and staff.

Archived, never lost. Students who leave are archived, not deleted. Their full history, class placements and results by term stay available to the School Admin and can be restored at any time.

ALREADY USING SOMETHING?

Here's what changes when you move.

You may already have school software, or a mix of spreadsheets and habits. Here is how Brightstars compares with what schools commonly use today.

	Paper & spreadsheets	Typical shared school software	Brightstars Academics
Look and feel	○ Whatever the office prints	◐ Vendor's name and colours	● Your name, logo, colours, address and app icon
Where records live	○ Files, books, laptops	◐ One shared database with other schools	● Your school's own private database
Entrance exams	○ Paper scripts, hand marking	◐ Often a separate tool or add-on	● Built-in CBT, instant ranking, free practice page
Admissions	○ A list re-sorted by hand	◐ Students re-typed after the exam	● Ranked waitlist, admit in one click, family logins created
Results	○ Formulas and retyping	◐ Entry, often without sign-off	● Entered, verified, approved, released
Report cards	○ Built one child at a time	◐ Generic template	● Branded, signed, with class averages, ready on release
Fees & receipts	○ Receipt books and a ledger	◐ Receipts printed on request	● Branded receipts sent by email and SMS by themselves
Online payment	○ Bank slip brought to office	◐ Often via the vendor's account	● Straight into your own Paystack account
Telling parents	○ Calls and notice boards	◐ Manual broadcasts	● Automatic email, SMS and in-app, from your accounts
Who sees what	○ Whoever holds the file	◐ A few broad admin levels	● 100+ permissions, class-scoped, fully logged
Store & library	○ Separate notebooks	◐ Rarely included	● Both included, linked to parents and payments
Nigerian structure	◐ Adapted by hand	◐ Often foreign defaults	● Crèche to SSS, departments, Naira, BulkSMS Nigeria
Getting started	○ Never really "set up"	◐ Weeks of configuration	● Live address on day one, spreadsheet import, guided checklist

● fully covered ◐ partly or sometimes ○ not covered. The first two columns describe common situations, not any particular product. Your current setup may already do some of these things well.

WHY SCHOOLS CHOOSE US

Ten reasons your school needs Brightstars.

1. **It's your brand, not ours**
   Parents see your school on every screen, receipt and report card, and as the app on their phone.

2. **Your data is truly yours**
   A private database for your school alone, exportable in full whenever you need it.

3. **Admissions to graduation in one system**
   From entrance exam to report card, nothing is typed twice.

4. **Fees collected faster**
   Live balances, automatic receipts and online payment straight to your account.

5. **Fewer phone calls**
   Parents get results, receipts and timetables automatically.

6. **Results you can trust**
   Four-step sign-off before anything reaches a parent.

7. **Accountability built in**
   Precise permissions and an activity log answer "who did this?".

8. **Made for Nigerian schools**
   Crèche to SSS, departments, Naira, Paystack and local SMS.

9. **A marketing tool too**
   A public entrance-practice page brings prospective families to your brand.

10. **Always improving**
    Regular releases, announced in-portal with a "What's new" card for each audience.

A BETTER DAY FOR EACH PERSON

Proprietor & head

- Whole school at a glance
- Control who does what
- Know who did what, and when
- Sign once, for every report card

Teachers

- Set work and quizzes online
- Marks add up on their own
- Register in moments
- See only their own classes

Bursar & office

- Record a payment in a minute
- Receipts sent automatically
- Every balance, always current
- Far fewer parent calls

Parents & students

- Everything on their phone
- Pay fees from anywhere
- Practise without limits
- Message the school directly

Stand out to families at admission time.

Parents now expect results, receipts and updates on their phone. Brightstars gives your school a modern portal under its own name.

Book a walkthrough →

GETTING STARTED

From "yes" to your first class online, in four steps.

No servers to buy and no software to install. Your portal works in any modern browser, and we set it up with you.

1
We create your school
name, motto, logo, colours and photographs

2
Your address goes live
immediately; add your own domain any time

3
You set up your school
classes, subjects, staff, roles and fee items

4
Everyone signs in
students, parents and staff choose their own password

Bring your records with you

Move from spreadsheets in three guided steps. Every import is checked line by line. Bad rows are reported by line number and the good rows still go in.

1 · Students	with logins and parent details
2 · Enrolment history	past classes and sessions
3 · Past results	so records stay complete

A checklist that guides you

The "Set up your school" card ticks off each step as you complete it.

- Review your classes (pre-seeded for you)
- Add subjects
- Enrol students
- Set up fee items
- Open the school store (optional)

A staff guide with pictures

A plain-language guide inside the portal, with screenshots and a link to every page it describes.

"What's new," for everyone

Staff, parents and students each see a short note about improvements that matter to them.

Exams from day one

The standard entrance papers are set up in one click, so your first entrance exam can run immediately.

ALL YOU NEED

No new hardware

A device and a browser

Any phone, tablet, laptop or desktop with a modern browser.

Your existing records

Student lists and past results in a spreadsheet, if you want to bring history across.

Your branding

Logo, colours, motto and a few photographs of the school.

QUESTIONS

Things schools ask us.

Do our staff need to be technical?

No. Staff use ordinary web pages, and each person sees only the screens that matter to their job. We set up your school with you, and you can change your colours, logo and roles yourself afterwards.

Can we use our own web address?

Yes. Your school gets an address the moment it's created, and it keeps working. To use your own domain as well, you add one simple record with your domain provider and we connect it.

Will messages come from us or from Brightstars?

From you. Once you connect your school's accounts, emails and texts are sent from them. The Brightstars logo is never shown on your portal.

What if something goes wrong on exam day?

Each answer is saved as the candidate presses Save & Next, and the clock is kept by the server. A candidate mid-paper carries on where they were, even after a restart, and a retake can be granted.

Do practice tests count towards grades?

Never. Students can practise as often as they like, the questions come in a new order each time, and nothing they do in practice is recorded.

Can parents pay online?

Yes, once you connect your school's own Paystack account. Parents pay any amount up to what they owe, by card, transfer or USSD, straight to your account. Office payments work exactly the same either way.

Can different staff have different access?

Yes. You choose what each role can do and can limit a teacher to their own classes and subjects. Nobody can give someone more access than they have themselves.

Can we bring our own questions and records?

Yes. Import your own question banks, and bring students, enrolment history and past results in from spreadsheets.

Does it work on phones?

Yes. Every portal works on phones, tablets and computers, and can be installed as an app with your school's logo.

What happens to students who leave?

They're archived, not deleted. Their sign-in stops, but their full record stays available and can be restored. Parents keep access to their fee account.

Can a school be paused?

Yes. A school can be suspended and reactivated independently. Its data is untouched and it returns exactly where it left off.

Who owns our data?

You do. Your records sit in your school's own database, and a complete export of your database and files can be produced at any time.

What does it cost?

Talk to us. We'll look at the size of your school and what you need, and give you a clear answer with no hidden extras.

Still have a question?

We'll answer it on a walkthrough, using your school's own name and colours.

Talk to us →

BrightStars

PART TWO · IN DEPTH

Features *in full.*

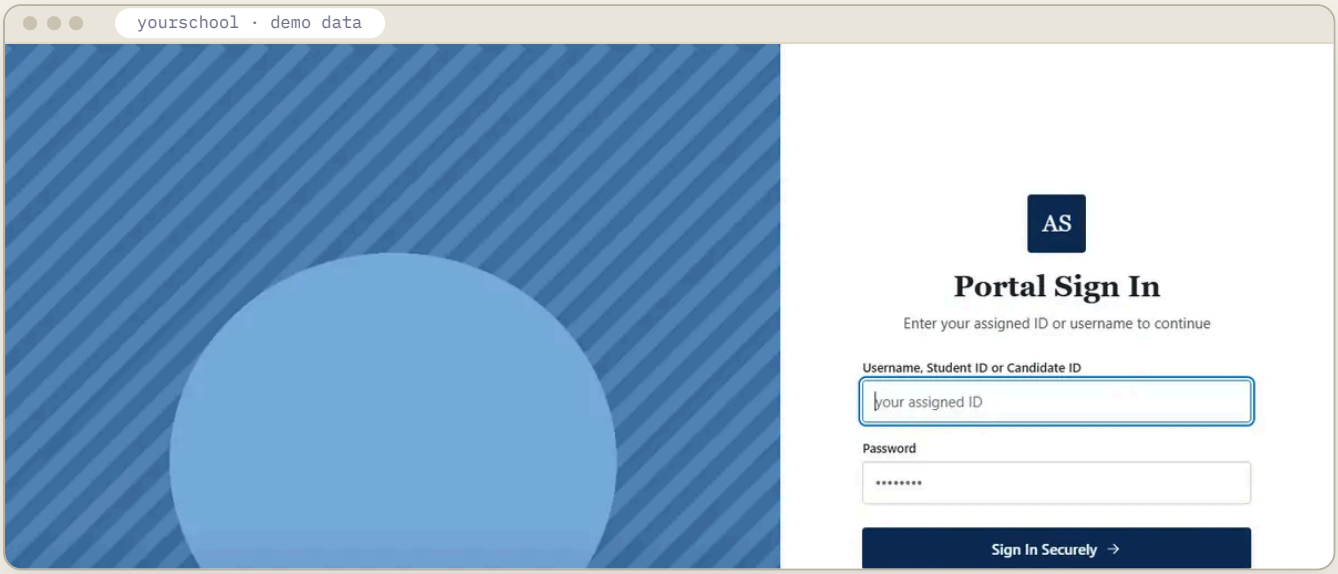

Every part of a Brightstars school portal, one page each: what it does, a real example from school life, who uses it and why it matters. Written for school leaders, not engineers.

FEATURE 01 · GETTING IN

Signing in, workspaces and the app

Everyone in your school community signs in at the same address, your school's own, and lands exactly where their job begins. No app store, no installation CD, no IT department needed.

A real screen from the demonstration school. All names and figures are sample data.

1
address for staff, students, parents and candidates

30 min
a reset link works once, then expires

0
app stores or installs needed

WHAT YOU CAN DO

- **One sign-in page for everyone.** Staff, students, parents and entrance candidates all use the same page. They type the ID or username they were given, and the portal works out who they are.
- **A one-time password to start.** Every new account begins with a temporary password, and the person must choose their own the first time they sign in.
- **Forgot your password?** A reset link goes to the email the school has on file. It works once, for 30 minutes.
- **Two workspaces.** The *School Portal* runs the school year. *Entrance Examination* runs admissions season. Staff with both choose on Workspace Home and switch with one click. Everyone else goes straight to theirs.
- **Installs like an app** on Android, iPhone, tablets and computers, carrying your school's name and logo as the icon.
- **Always shows it is working.** When you open a page, a soft outline and spinner show until the next page is fully ready, so nobody taps twice on a slow connection.
- **Back always makes sense.** The Back button returns to where you were, and never past the Overview.

EXAMPLE

Mrs Okafor, a parent, taps *Install* on the bar at the bottom of her phone screen. From then on, your school's crest sits on her home screen beside WhatsApp, and one tap opens her children's fees and results.

WHO USES IT

Every staff member · Students · Parents · Candidates

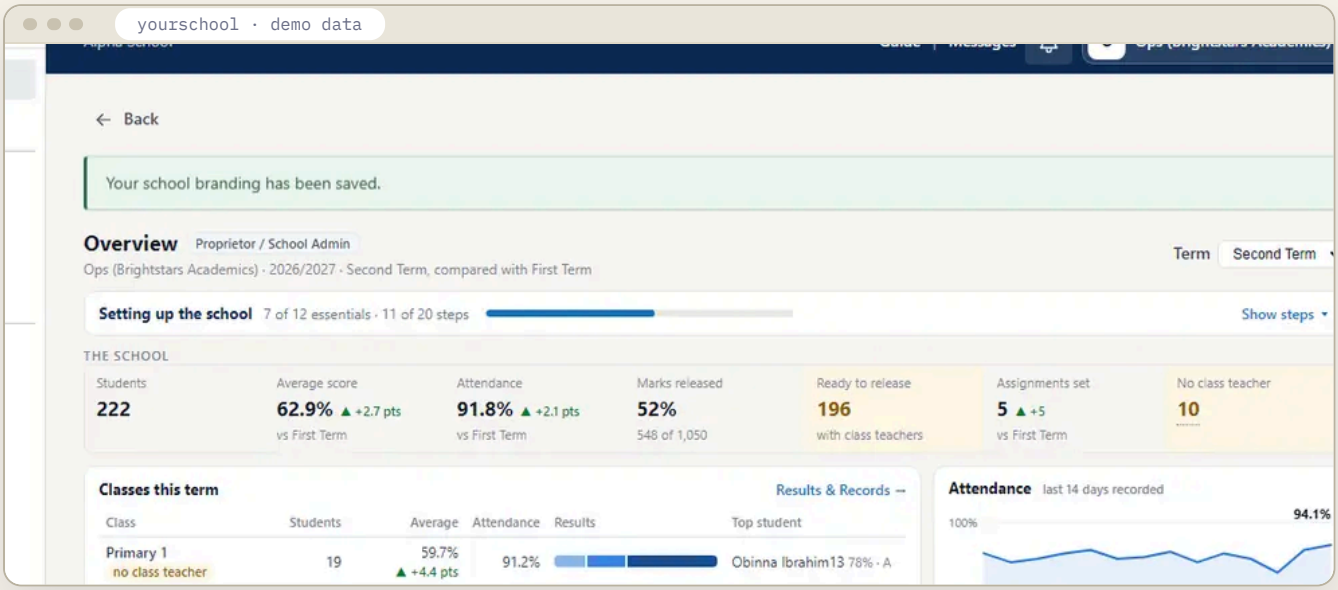

WHY IT MATTERS

A school portal only works if people actually use it. Signing in takes seconds, and the app on a parent's phone keeps your school one tap away.

FEATURE 02 · GETTING IN

The Overview: a dashboard for every role

The first page each person sees is built for their job. The bursar sees money, a class teacher sees their class, and the proprietor sees the whole school. Nobody wades through screens that aren't theirs.

A real screen from the demonstration school. All names and figures are sample data.

10
role-specific views, from bursar to librarian

▲▼
every figure compared with the last period

1 page
to know what needs attention today

WHAT YOU CAN DO

- **Proprietor and School Admin:** the whole school this term, marks waiting to be released class by class, classes with no class teacher, and the top student in every class.
- **Head teacher:** the same whole-school picture, without the setup tasks.
- **Class teacher:** whether today's register is taken, marks ready to release, marks subject teachers haven't sent yet, and report card comments still to write.
- **Subject teacher:** each class's average against last term and the school, the spread of scores, who needs support, and work waiting to be graded.
- **Bursar:** today's, this month's and this session's collections, six months of charts, how money was paid, and the largest balances.
- **Librarian, admissions officer, secretary and store keeper** each get their own figures, from overdue books to candidates awaiting a decision.
- **Every number is compared** with last term, yesterday or last month. ▲ and ▼ show the direction, and yellow tiles flag anything waiting on someone.

EXAMPLE

Mr Bello, a class teacher, opens the portal at 8am. His card shows that JSS 2's register hasn't been taken, three subject teachers still owe him marks, and Chioma currently leads the class.

WHO USES IT

Proprietor · Head teacher · Teachers · Bursar · Office staff

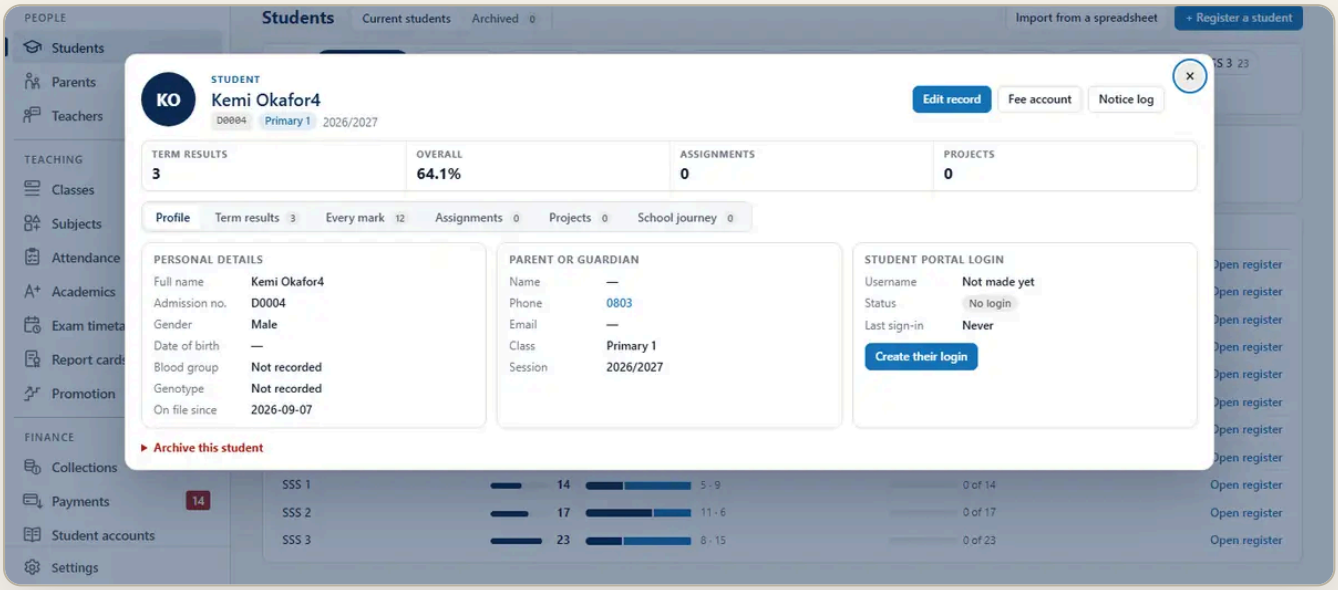

WHY IT MATTERS

Leaders stop asking for reports, because the report is the front page. Problems such as unpaid fees, missing marks or an untaken register show up before they grow.

FEATURE 03 · PEOPLE

Students: every record in one place

Every student's details, class, results, work, fees and school journey live in one record that a single click opens.

A real screen from the demonstration school. All names and figures are sample data.

6
tabs in every student record

0
admission numbers typed by hand

100%
of history kept when a student leaves

WHAT YOU CAN DO

- **Every class at a glance:** numbers, boys and girls, and how many students can sign in. Click a class to open its register.
- **Register a student in one step.** This creates the record, places them in a class and gives them a login. The admission number is generated automatically, so it can never clash with another student's.
- **The student's record** opens over the list, with tabs for profile, parent or guardian, term results, every mark, assignments, projects and school journey.
- **SSS departments.** Each SSS student belongs to Science, Art or Commercial, and only sees the subjects their department takes.
- **Reset a password** to a new one-time password, ready to print, or switch a student's sign-in off without touching their record.
- **Archive, never delete.** When a student leaves, archiving keeps their whole history, stops their sign-in at once and removes them from current registers. A School Admin can restore them later.
- **Notice log:** see every email and text sent to the family about that student, and whether it arrived.

EXAMPLE

A parent calls to say they never got the fee notice. The secretary opens Kemi's record, presses *Notice log*, and sees the SMS was delivered on 3 October at 10:14, with the email returned because the address had a typo. She fixes the email on the spot.

WHO USES IT

Secretary · Records officer · Class teachers · School Admin

WHY IT MATTERS

No more hunting through files and folders. One record answers almost every question about a child.

FEATURE 04 · PEOPLE

Bulk import: bring your records with you

Switching systems shouldn't mean retyping 600 students. Bring them in from spreadsheets in three guided steps, and keep their history too.

THREE GUIDED STEPS

1 · Students
records, classes, logins

→

2 · History
past classes and years

→

3 · Past results
earlier terms, released

412 imported · 1 skipped: line 88, guardian phone is missing · 0 duplicates

3
guided steps: students, history, results

Line-by-line
error report, with good rows still imported

0
duplicates when a file is run twice

HOW IT WORKS, STEP BY STEP

1. Download the template for the step you're on.
2. Fill it in from your old system or spreadsheet.
3. Upload it. Every row is checked, and problems are listed by line.
4. Download the new logins and hand them out.

WHAT YOU CAN DO

- **Step 1, Students.** Upload names, gender, class and guardian contacts. Each row becomes a full student record with a class place and a login, exactly as if registered by hand.
- **Step 2, Enrolment history.** Bring in each student's past classes: promoted, repeated, graduated or withdrawn. Earlier school years are created automatically when needed.
- **Step 3, Past results.** Bring in results from earlier terms, so report cards and academic records are complete from day one.
- **Checked line by line.** A row with a problem is skipped and reported by line number and reason, and every good row still goes in.
- **Safe to run twice.** A result that's already on record is left alone and reported, so re-uploading a file never doubles anything.
- **Logins ready to hand out.** New usernames and one-time passwords appear once and can be downloaded as a spreadsheet.
- **Recorded:** every import is logged with who ran it, the file name and the counts.

EXAMPLE

St. Mary's arrives with three Excel files from their old system. By lunchtime, 412 students are enrolled with logins, their past two years of classes are on record, and last session's results already sit on their academic records. Row 88 is flagged for a missing guardian phone number, and that's the only one.

WHO USES IT

School Admin · Records officer · Anyone given 'Run bulk imports'

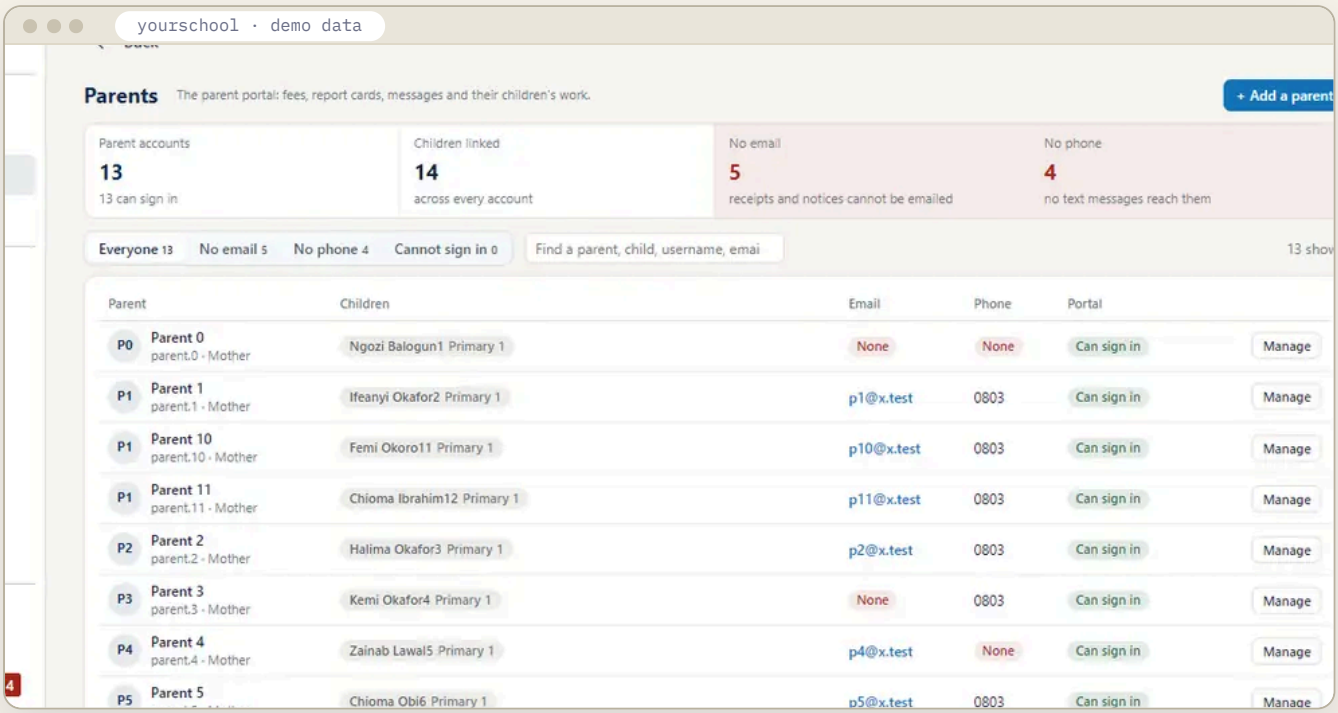

WHY IT MATTERS

The biggest barrier to switching is the data you already have. This removes it.

FEATURE 05 · PEOPLE

Parents and families

Every family gets one parent account that covers all their children, linked by the school, so the right people see the right child.

A real screen from the demonstration school. All names and figures are sample data.

1
parent login for all of a family's children

2
warnings: no email, no phone on file

0
self-registered strangers

WHAT YOU CAN DO

- **One parent, many children.** Siblings share one parent account, so a mother of three signs in once and sees all three.
- **Created by the school, never by strangers.** Parent accounts can't be self-registered, so only the guardians you link can see a child.
- **Spot missing contacts.** The page counts parents with no email or no phone, the families receipts and notices can't reach, so you can fix them.
- **Fast search** by parent, child, username, email or phone.
- **New password in seconds,** shown once and ready to print, when a parent forgets theirs.
- **Created automatically on admission.** Admitting an entrance candidate can create the parent's account from the details already given.
- **Early years too.** Parents of Crèche and Nursery pupils still see fees, scores and report cards, and can pay online.

EXAMPLE

Mr and Mrs Adeyemi have children in Primary 4, JSS 1 and SSS 2. The school links one parent account to all three. On their phone they see the three children side by side, with what each owes and how each is doing.

WHO USES IT

Secretary · School Admin · Parents

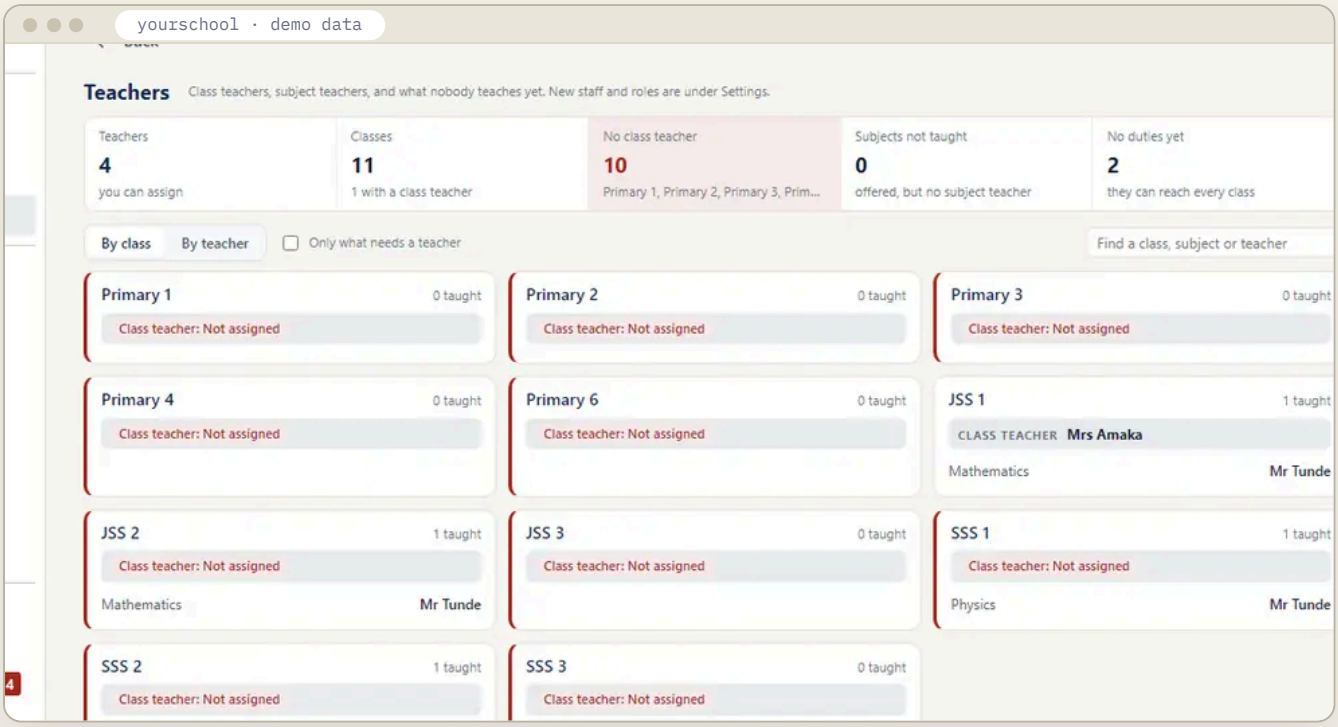

WHY IT MATTERS

Families who can see everything stop calling to ask. Linking siblings removes the confusion of several logins.

FEATURE 06 · PEOPLE

Teachers and teaching duties

See at a glance who teaches what, and which classes and subjects still have nobody. A teacher's duties then decide exactly what they see.

A real screen from the demonstration school. All names and figures are sample data.

2
views: by class or by teacher

Red
flags classes and subjects with no teacher

Only
their own classes on every teacher's screen

WHAT YOU CAN DO

- **Gaps shown in red:** classes with no class teacher, and subjects offered but taught by nobody.
- **Two views.** *By class* lists each class with its class teacher and subject teachers. *By teacher* lists each person with everything they teach.
- **Class teacher duties.** A class teacher takes the register, writes report card comments and releases the class's results.
- **Subject teacher duties.** A subject teacher teaches chosen subjects in chosen classes, and in SSS can be limited to one department.
- **Duties shape every screen.** Once set, a teacher's student lists, subject choices, results and work pages show only their own classes.
- **Head teachers can assign duties** to staff below them, in the classes they look after.
- **Change duties** in a pop-up, without leaving the page.

EXAMPLE

Mr Tunde teaches Mathematics in JSS 1 and JSS 2, and Physics to Science students in SSS 1. When he opens Results, he sees exactly those three groups and nobody else's marks.

WHO USES IT

School Admin · Head teacher

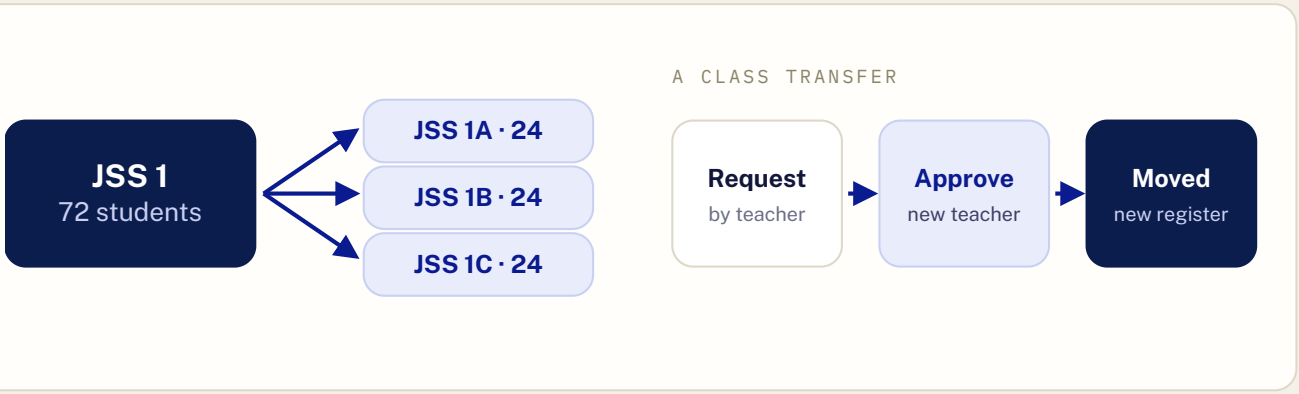

WHY IT MATTERS

Teachers see a clean, short list instead of the whole school. Leaders can see staffing gaps before term starts.

FEATURE 07 · TEACHING

Classes, departments, subdivisions and transfers

The platform already knows how a Nigerian school is arranged. Split big classes into arms, balance them automatically, and move students between arms with proper approval.

16
classes ready, Crèche to SSS 3

3
SSS departments: Science, Art, Commercial

Auto
balancing of arms by class size

HOW IT WORKS, STEP BY STEP

1. Switch on the classes your school runs.
2. Split large JSS or SSS classes into arms and lock them.
3. Give each arm its class teacher.
4. Students are balanced automatically. Transfers need approval.

WHAT YOU CAN DO

- **Ready from day one:** Primary 1–6, JSS 1–3 and SSS 1–3 are already set up. Rename, reorder or add classes to match your school.
- **Crèche and Nursery 1–3** are there, switched off until you need them. Their pupils don't sign in, but teachers record scores and parents still see fees and report cards.
- **SSS departments:** Science, Art and Commercial. Each subject lists the departments that take it, so students only see what applies to them.
- **Class subdivisions** such as JSS 1A and JSS 1B, JSS 2 Gold, or SS 1A (Science), each with its own class teacher. Lock them once they're set.
- **Automatic balancing:** new, imported and admitted students join the arm with the fewest students.
- **Class transfers with approval:** a class teacher asks to move a student. Nothing changes until the receiving class teacher, or the head, approves.
- **Removing an arm** moves its students into the others automatically.

EXAMPLE

JSS 1 has 72 students. The School Admin creates JSS 1A, 1B and 1C, and the platform places 24 in each. In week three, Mrs Eze asks to move Tobi to 1C to sit with his twin. Mr Obi, 1C's class teacher, approves, and Tobi appears on his register that afternoon.

WHO USES IT

School Admin · Head teacher · Class teachers

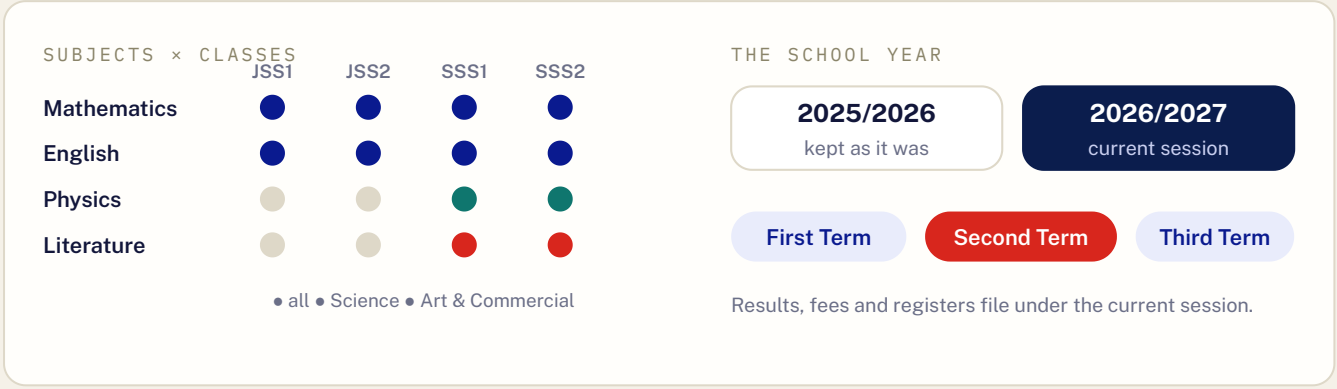

WHY IT MATTERS

Large schools get tidy, even classes and a proper record of every move, with no spreadsheets and no arguments.

FEATURE 08 · TEACHING

Subjects, sessions and terms

Set up what each class studies and the shape of your school year once. Every form, register and report then follows it.

1
subject attached to many classes at once

3
terms per session, plus Full Session

Locks
to freeze a subject while results are finalised

HOW IT WORKS, STEP BY STEP

1. Create each subject and tick the classes that take it.
2. For SSS, tick the departments that take it.
3. Set the current session and its release date.
4. Lock subjects once the term's results are final.

WHAT YOU CAN DO

- **Subjects as a list or a grid** of subjects against classes, so a class missing a subject stands out.
- **One subject, many classes:** attach Mathematics to every class in one go.
- **Departments per subject:** tick Science for Physics, Art and Commercial for Literature, or nothing for a subject everyone takes.
- **Locks:** lock a subject for a class once its results are being finalised, so nothing changes by accident. The School Admin applies the final lock.
- **Academic sessions** (school years, such as 2026/2027). One is always current, and new enrolments, results, fees and attendance are filed against it.
- **Terms:** First, Second and Third Term, or Full Session for the year as a whole.
- **Release dates:** set a session's release date, and results release themselves on the day.

EXAMPLE

The head sets 2026/2027 as the current session in August. From that moment, every new register, fee and result is filed under it automatically, and last year's records stay exactly as they were.

WHO USES IT

School Admin · Head teacher · Academic administrator

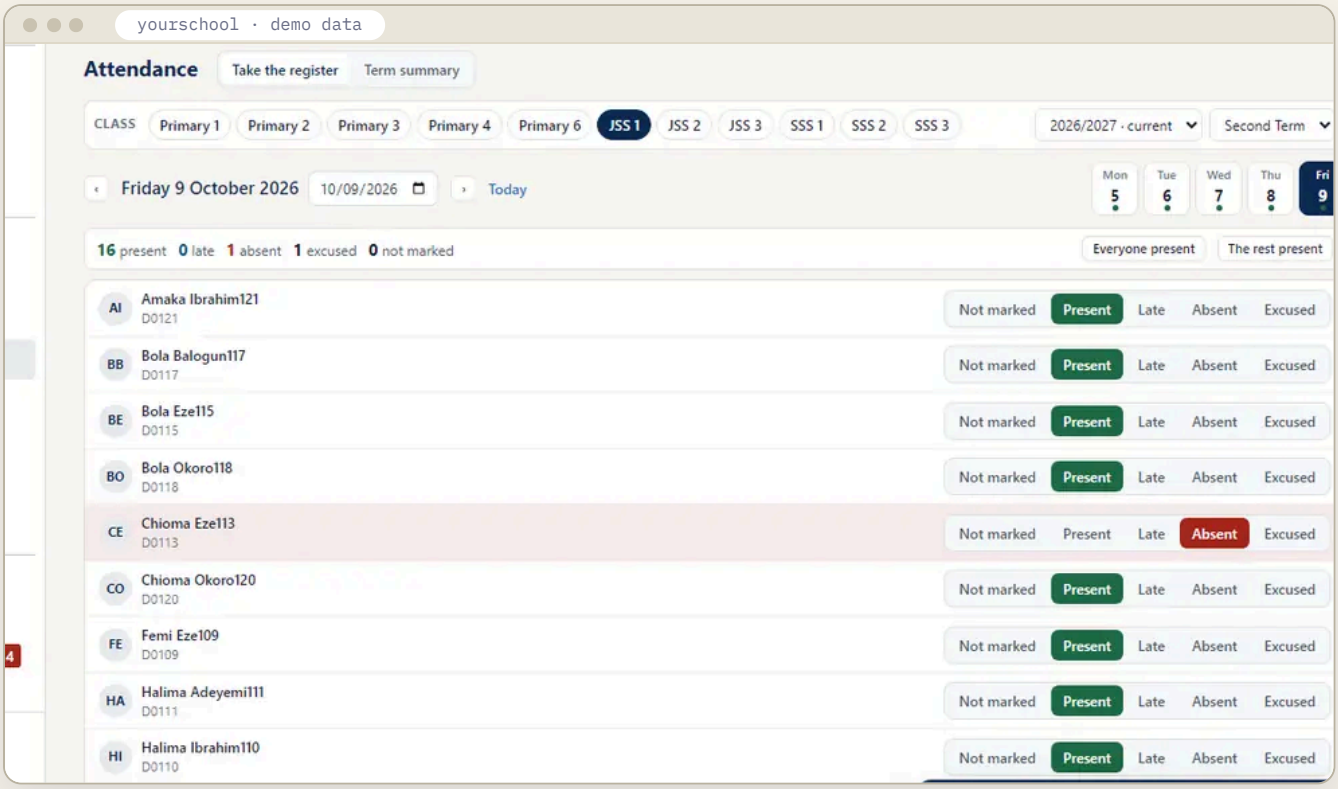

WHY IT MATTERS

Set it up once and get clean records year after year, without the 'which spreadsheet is this year's?' confusion.

FEATURE 09 · TEACHING

Attendance

Take the register in under a minute. Parents can see the record the same day.

A real screen from the demonstration school. All names and figures are sample data.

1 tap
per child, or everyone present in one

4
marks: present, late, absent, excused

Same day
visible to parents

WHAT YOU CAN DO

- **One tap per child:** Present, Late, Absent or Excused, once per day.
- **Shortcuts:** *Everyone present* and *The rest present* handle a normal day in seconds.
- **The school week at a glance:** a green dot shows each day whose register was taken. Arrows step back or forward a day.
- **Nothing assumed.** A child left blank simply has no mark, and the system never pretends they were present.
- **Who marked it.** Each mark records who last changed it.
- **Term summaries** show totals and a percentage for every student, counting late as present.
- **Arms respected:** the class teacher of JSS 1A sees and marks only JSS 1A.
- **Families see it too:** students and parents see a day-by-day history and a term summary.

EXAMPLE

At 7:50am Miss Ade opens JSS 1A on her phone, taps *Everyone present*, then marks Chioma absent. By break time, Chioma's mother can see the absence in her parent portal.

WHO USES IT

Class teachers · Head teacher · Parents · Students

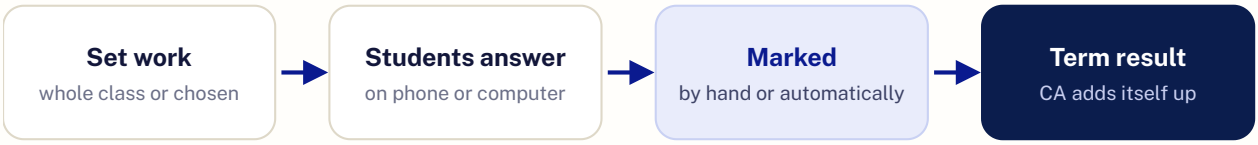

WHY IT MATTERS

Attendance stops being a paper book that nobody reads and becomes a record parents can see and leaders can act on.

FEATURE 10 · TEACHING

Assignments and projects

Set homework and projects online, collect answers online, and mark without retyping. Every mark flows into the term result automatically.

Parents are alerted when work is set, and again when it is marked.

2
assignment formats: written or auto-marked quiz

Whole class
or chosen students, in one step

0
marked work that can be deleted by accident

HOW IT WORKS, STEP BY STEP

1. Choose the class and subject.
2. Add the title, dates and instructions, and the questions for a quiz.
3. Send it to the whole class or chosen students.
4. Mark it, or let the quiz mark itself. CA updates automatically.

WHAT YOU CAN DO

- **Guided forms** ask one thing at a time: class and subject, then details and dates, then the format, then who receives the work.
- **Written or quiz.** An assignment can be written work you mark by hand, or an on-screen quiz marked automatically, timed or not.
- **Whole class or chosen students.** Whole-class work also reaches students who join the class later.
- **Projects** for longer practical tasks: a model, a report, a garden. Record completion, a score and a remark once you've seen the work.
- **Every answer in one view:** open an assignment to see each student's answer or score.
- **Protected marks.** Work that has marks can't be deleted, so a report card always adds up. Unmarked work can be deleted and restored later.
- **Families told automatically** when work is set and when it is marked.

EXAMPLE

Mrs Nwosu sets a 10-question Basic Science quiz for all of JSS 2, due Friday. Students take it on their phones, and the scores are in her list before she gets home. Their parents saw an alert the moment it was set.

WHO USES IT

Subject teachers · Class teachers · Students · Parents

WHY IT MATTERS

Less marking, no lost exercise books, and continuous assessment that adds itself up.

FEATURE 11 · TEACHING

Tests, examinations and practice

The same computer-based exam engine that runs your entrance exam also runs everyday class tests and end-of-term examinations, marked the moment students finish.

SECOND TERM EXAMINATION · SSS 1 MATHS

Q12. Solve $3x + 5 = 20$

A. 3 | B. 5 | C. 6 | D. 15

Draft | Open to students

30 questions

60 marks

45 min time allowed

1.5 min per question

4
options per question, marked instantly

∞
practice retakes, never counted

Separate
permissions for tests and exams

HOW IT WORKS, STEP BY STEP

1. Create the test or exam and its time allowed.
2. Add questions in the pop-up, one after another.
3. Open it to students when it's ready.
4. Scores arrive marked, ready to send to the class teacher.

WHAT YOU CAN DO

- **Tests and Examinations** work the same way, but sit on separate lists with separate permissions, so you decide who sets each.
- **Question editor in a pop-up:** add a question, an optional picture and instruction, four options and the marks, then go straight on to the next question.
- **Reorder questions** with arrows, edit in place, and see the total marks and time per question as you build.
- **Draft until ready:** a paper stays hidden until you open it to students, and it needs at least one question first.
- **Timed and automatically marked,** with the clock kept by the system.
- **Practice tests** that students can retake without limit, in a new order every time, with answers shown afterwards. Practice is never recorded and never counts.
- **Department-aware:** SSS students only see tests for subjects their department takes.

EXAMPLE

Mr Ibrahim builds a 30-question Second Term Mathematics examination for SSS 1 Science. 41 students sit it at 9am, and by 10:05 every script is marked and the scores are waiting for him to send to the class teacher.

WHO USES IT

Subject teachers | Head teacher | Students

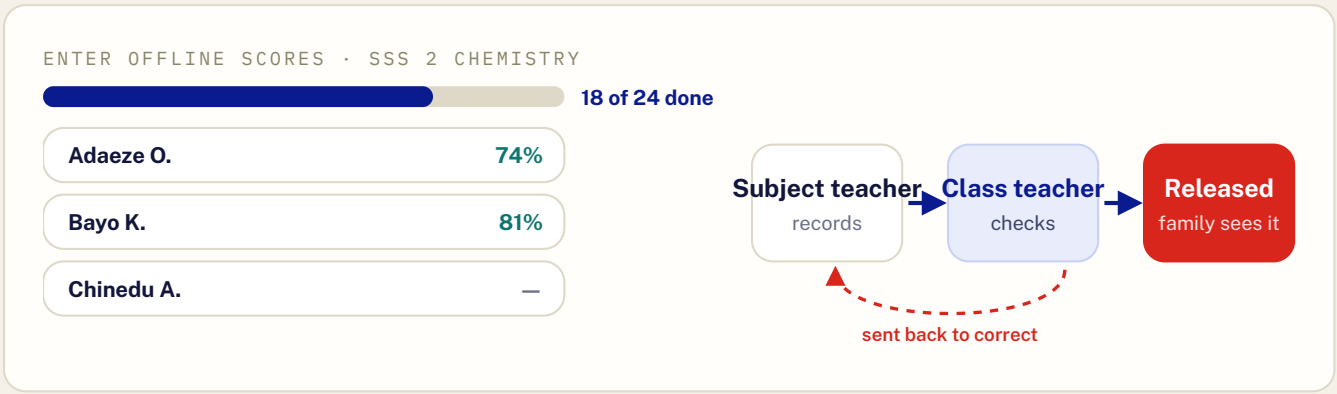

WHY IT MATTERS

Hours of marking become minutes. Students get unlimited practice for free, and grades stay honest.

FEATURE 12 · TEACHING

Results and offline scores

Marks from tests, assignments, projects and paper exams all follow one route. The subject teacher records, the class teacher releases, and nothing reaches a parent until it's checked.

40 + 60
continuous assessment plus exam

4
stages: entered, verified, approved, released

1 click
to release a whole class that is ready

HOW IT WORKS, STEP BY STEP

1. The subject teacher enters or collects scores.
2. They send them to the class teacher.
3. The class teacher checks, or sends a mark back.
4. Release, and report cards and parent alerts follow.

WHAT YOU CAN DO

- **Enter offline scores fast.** Work down a class one student at a time, type the test and exam scores, watch the percentage appear, and press *Save and next*.
- **Absences recorded,** with the reason a student missed a test.
- **Subject teacher to class teacher.** Send one mark, a student's whole term, or the whole class at once.
- **Send back for correction.** A class teacher can return a mark that looks wrong to the subject teacher.
- **Release with confidence.** Release a student's term with one button, or preview a whole class (who is ready, what is waiting) and release everyone ready in one step.
- **Your own weighting.** Continuous assessment out of 40 (split between tests, assignments and projects as your school chooses) plus the exam out of 60.
- **Always worked out fresh** from the marks on record, so totals can never disagree with the marks behind them.

EXAMPLE

Mrs Bello records SSS 2 Chemistry exam scores from paper scripts in 20 minutes, then presses *Send all my results for this class*. Mr Adamu, the class teacher, spots that one score is out of 600 instead of 60 and sends it back, and it's corrected before any parent sees it.

WHO USES IT

Subject teachers · Class teachers · Head teacher

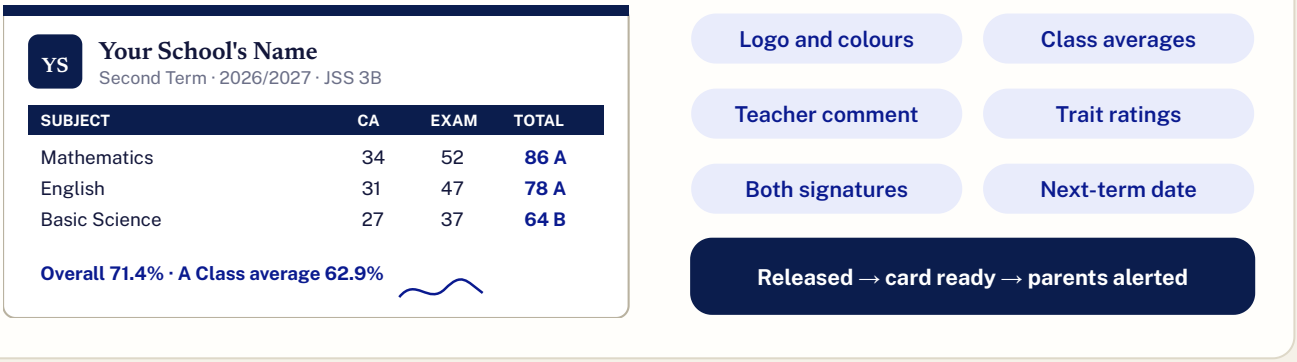

WHY IT MATTERS

Fewer wrong grades, no last-minute spreadsheet panic, and a clear trail of who entered and who released every mark.

FEATURE 13 · TEACHING

Report cards

Professional, signed, branded report cards that build themselves the moment a child's term is complete, ready as a page and as a PDF.

1 PDF
for a whole class, ready to print

0
incomplete cards: one missing mark holds it back

3
alerts to parents: in-app, email, SMS

HOW IT WORKS, STEP BY STEP

1. Teachers write comments and rate traits, even before release.
2. Each teacher saves their signature once.
3. Results are released by hand or on the release date.
4. Cards appear, parents are alerted, and you print the class PDF.

WHAT YOU CAN DO

- **Built automatically:** when every result for a child's term is released, the card appears for the student, the parent and staff.
- **Never incomplete:** one missing result holds the card back, so a card never shows a gap.
- **On the card:** your logo, colours, address and motto, the student's photo, each subject's CA, exam, total, grade and remark, and the overall percentage and grade.
- **Class averages,** overall and per subject.
- **Affective and psychomotor ratings** such as Punctuality, Neatness, Leadership, Handwriting and Sports, on a five-point scale.
- **Signatures:** each class teacher draws or uploads their own. The head's title (Principal, Proprietress and so on) and signature print on every card.
- **Whole class in one PDF** for printing and filing, plus the next-term start date.
- **Parents alerted** by in-app alert, email and SMS the moment the card is ready.

EXAMPLE

On the last Friday of term, Mrs Okon releases JSS 3B's results at 2pm. By 2:01, 31 report cards exist, each signed, and parents start receiving texts. She downloads the whole class as one PDF for the file cabinet.

WHO USES IT

Class teachers · Head teacher · Report Card Officer · Parents

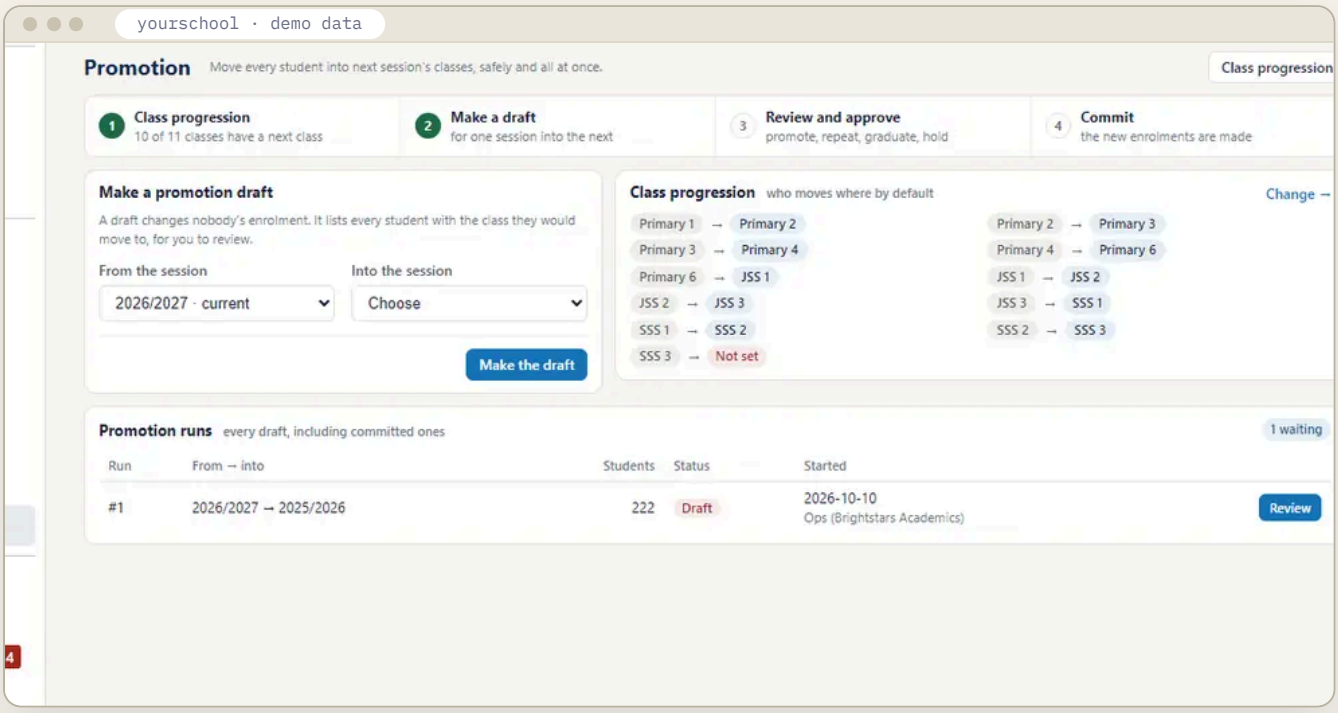

WHY IT MATTERS

The most stressful week of term becomes a single button. Parents get a document that looks as good as your school is.

FEATURE 14 · TEACHING

Promotion to the next session

Move the whole school up a class at the end of the year, safely and all at once, with every decision reviewed before anything changes.

A real screen from the demonstration school. All names and figures are sample data.

6
decisions: promote, repeat, transfer, graduate, hold, withdraw

1
commit moves the whole school

Forever
record of every promotion run

WHAT YOU CAN DO

- **Class progression rules,** set once: Primary 6 goes to JSS 1, JSS 3 to SSS 1, and so on.
- **A draft for every student,** with the class each would move to already filled in.
- **Six decisions:** promote, repeat, transfer to another class, graduate, hold to decide later, or withdraw.
- **Batch or one by one.** Set a decision for a whole class, then change individual students.
- **Nothing moves until you commit.** Save, review and approve the draft as often as you like.
- **A permanent record:** every promotion run, committed or cancelled, stays readable.

EXAMPLE

In July the head opens Promotion, makes a draft from 2026/2027 into 2027/2028, marks two JSS 2 students to repeat and SSS 3 as graduating, approves it, and commits. 640 students are in their new classes in one step.

WHO USES IT

School Admin · Head teacher

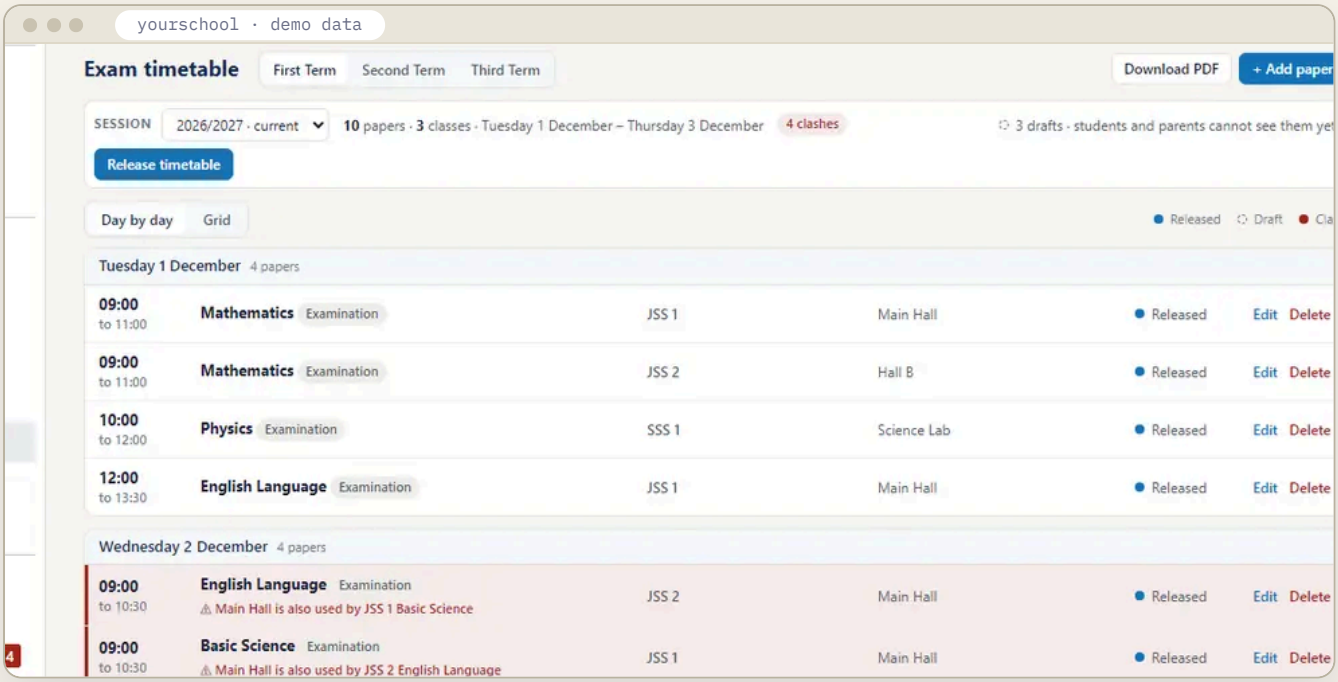

WHY IT MATTERS

End-of-year promotion is usually days of error-prone admin. Here it's one careful, reversible process.

FEATURE 15 · TEACHING

Exam and test timetables

Build the timetable as a private draft, let the system catch clashes, then release it to every student and parent at once.

A real screen from the demonstration school. All names and figures are sample data.

Auto
clash detection for classes and halls

1
release notifies every student and parent

PDF
download and print for families

WHAT YOU CAN DO

- **Add papers quickly:** class, subject, test or exam, date, time and venue. *Keep this open* lets you enter a whole week without starting over.
- **Clash detection:** a class with two papers at once, or two papers in the same hall, is flagged with what it overlaps.
- **Two views:** day by day, or a grid of days against classes.
- **Private until released.** Students and parents never see a draft.
- **One release, everyone told,** by in-app alert, email and SMS to every affected student and parent.
- **PDF and print,** for staff and families.
- **A separate permission to release,** so you choose who may notify the whole school.

EXAMPLE

The exams officer enters 48 papers for First Term. The system flags that Main Hall is double-booked on Wednesday at 9am. She moves JSS 2 English to Hall B, releases, and 600 families get the timetable on their phones.

WHO USES IT

Exams officer · Head teacher · Students · Parents

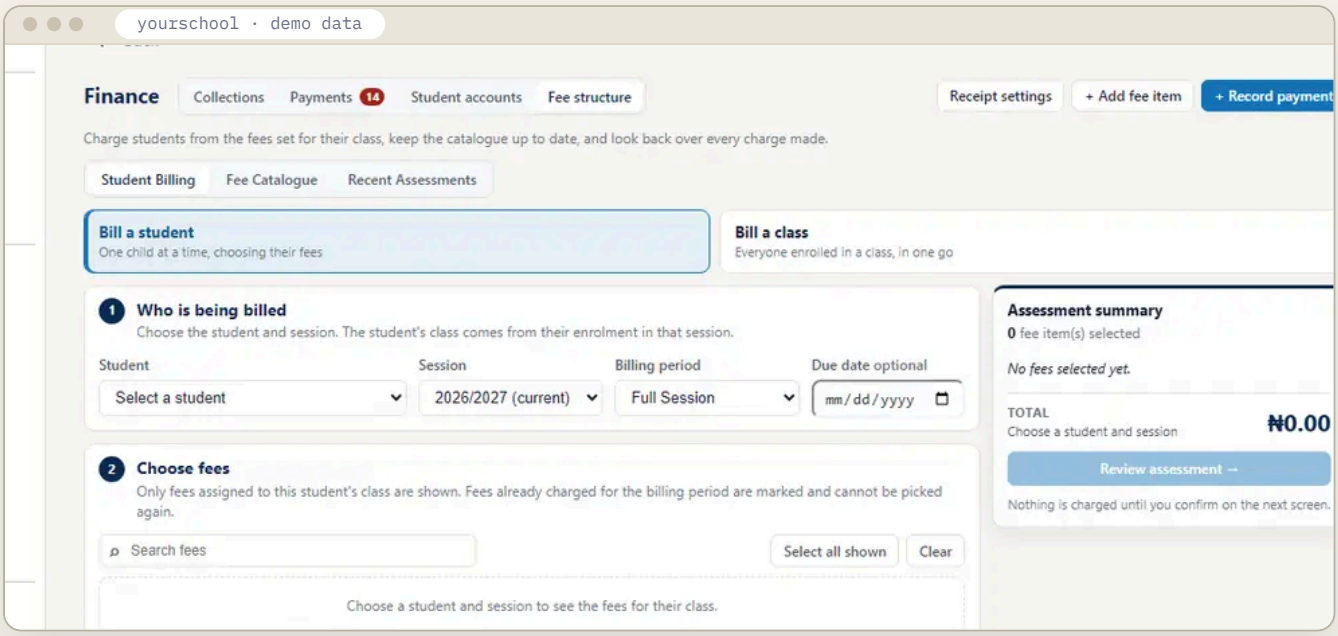

WHY IT MATTERS

No more photocopied timetables with clashes discovered on the morning of the exam.

FEATURE 16 · MONEY

Fee structure and billing

Decide what you charge once, by class, then bill one child or a whole class in a few clicks, without charging anyone twice.

A real screen from the demonstration school. All names and figures are sample data.

5
billing periods: one-off, full session, or each term

Review
before a single naira is charged

0
double charges on a re-run

WHAT YOU CAN DO

- **Fee catalogue:** tuition, development levy, uniform, transport, PTA, exam fees. Each item is assigned to the classes that pay it.
- **Billing periods:** a one-off charge, a full session, or First, Second or Third Term, with an optional due date.
- **Bill a student or bill a class.** Only the fees assigned to that class are offered.
- **Review before charging.** See how many students, which fees and the total per student before anything is charged.
- **Batches you can watch.** A class is billed in batches, with progress shown. Anyone who couldn't be billed is listed with a reason and a retry button.
- **Never twice.** A student already charged a fee for that period is skipped, so re-running is always safe.
- **Parents told** by in-app alert, email and SMS when a new fee is charged.

EXAMPLE

The bursar bills all of JSS 1 for Second Term: tuition ₦85,000, development levy ₦10,000, PTA ₦2,500. She reviews the total, confirms, and 72 accounts are charged with parents notified. Her connection drops halfway, so she presses Retry, and only the 9 not yet billed are charged.

WHO USES IT

Bursar · Finance Manager · School Admin

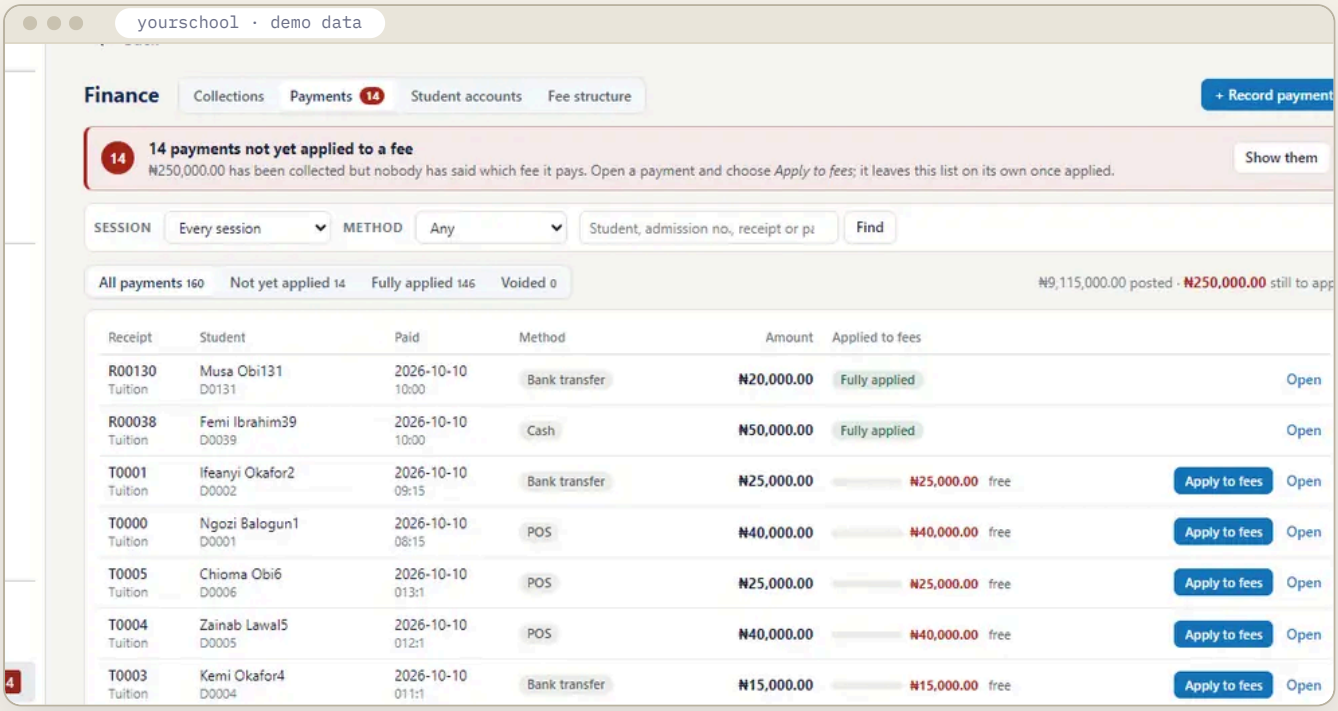

WHY IT MATTERS

Billing day stops being a week of manual ledger entries, and double charges stop happening.

FEATURE 17 · MONEY

Recording payments and receipts

Record a payment in under a minute. A numbered, branded receipt reaches the parent immediately, and every naira is accounted for.

A real screen from the demonstration school. All names and figures are sample data.

< 1 min
to record a payment

3
ways the receipt reaches the parent

Void
with a reason, never delete

WHAT YOU CAN DO

- **Quick payment form:** find the student as you type, then enter the amount, what it's for, the method (cash, transfer, POS) and a reference.
- **Instant receipt,** numbered and branded, with your logo, colours, signature, the bursar's note and the balance still due.
- **Automatic delivery:** in-app alert, email with the PDF attached, and SMS.
- **Apply to fees:** say which charges a payment covers. *Fill oldest first* clears the oldest debts until the money runs out.
- **A banner that won't go away** while any payment isn't yet applied to a fee, so money is never quietly forgotten.
- **Void, never delete.** A wrong entry is voided with a reason and stays on record.
- **Resend any receipt** by email or SMS, or print it again, at any time.
- **Your receipt numbering:** choose your own prefix, once, for the whole school.

EXAMPLE

Mr Eze pays ₦50,000 in cash at the bursary. Before he reaches the school gate, his phone buzzes with a text, and the receipt PDF is in his email showing ₦70,000 still due for the session.

WHO USES IT

Bursar · Cashier · Finance Manager · Parents

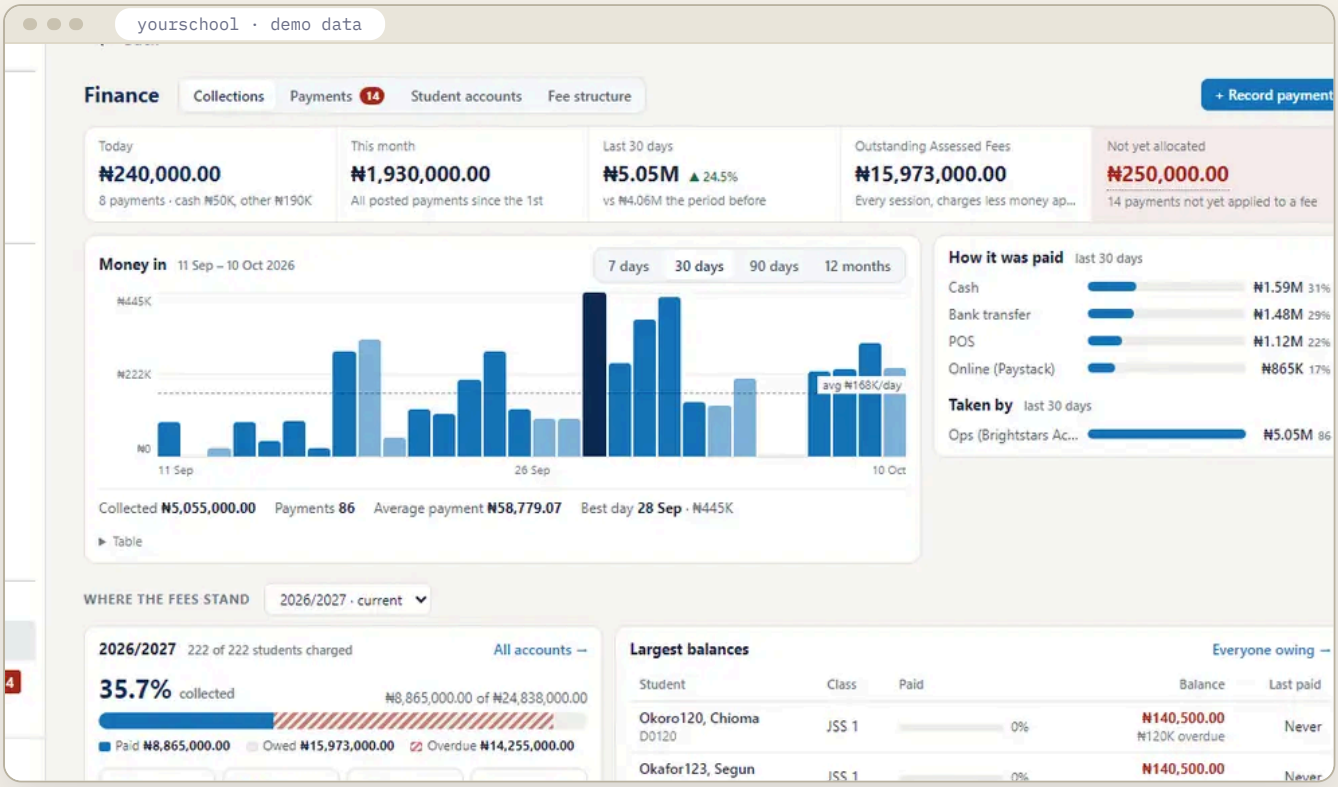

WHY IT MATTERS

No receipt books, no 'I paid but have no proof', and no unexplained gaps in the ledger.

FEATURE 18 · MONEY

Student accounts and collections

Know at any moment how much has come in, how much is owed, by whom, and how it was paid.

A real screen from the demonstration school. All names and figures are sample data.

4
periods: 7, 30, 90 days or 12 months

5
filters: owing, nothing, part, full, no fees

Own
takings only, for cashiers

WHAT YOU CAN DO

- **Collections:** today, this month, and the last 7, 30 or 90 days or 12 months, each compared with the period before.
- **Charts you can read:** money in by day, week or month, with a table under every chart.
- **How it was paid** (cash, transfer, POS, online) and who took it.
- **Where the fees stand:** the share of charged fees collected, how much is overdue, and how many students are paid in full, part paid or unpaid.
- **Student accounts:** filter by class, by owing, nothing paid, part paid or paid in full, and sort by largest balance.
- **Each child's account:** every fee and how it's billed, what's paid and owed, and every payment, the same view the parent sees.
- **Cashiers see only their own takings,** while the bursar sees the whole school.

EXAMPLE

At the PTA meeting the proprietor is asked how fee collection is going. She opens Collections on her phone: 35.7% of the session collected, 68 families yet to pay anything, with the ten largest balances listed.

WHO USES IT

Proprietor · Bursar · Finance Manager

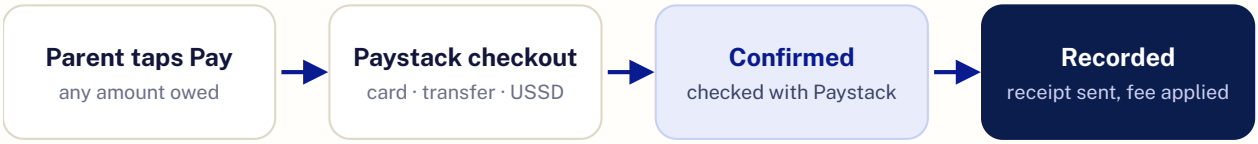

WHY IT MATTERS

Cash flow stops being a guess. You can chase the right families, politely, with the right numbers.

FEATURE 19 · MONEY

Online payments and refunds

Connect your school's own Paystack account and parents pay school fees and store purchases from their phone, straight into your account.

Money goes straight to your school's own Paystack account.

Refunds are only marked done once Paystack confirms the money went back.

Direct
to your school's own Paystack account

24/7
parents can pay, even at 10pm on Sunday

Verified
with Paystack before it is recorded

HOW IT WORKS, STEP BY STEP

1. The School Admin pastes the Paystack keys once.
2. Paste the webhook address into Paystack's dashboard.
3. Parents see 'Pay online' on their child's fee account.
4. Payments arrive recorded, receipted and applied.

WHAT YOU CAN DO

- **Your account, your money:** payments go directly to your school's Paystack account. There's no shared platform account in the middle.
- **Pay what you can:** parents pay any amount up to what's owed, for one fee or several together.
- **Every Paystack method:** card, bank transfer, USSD, whatever Paystack offers.
- **Recorded automatically,** with the same receipt, notification and ledger entry as an office payment.
- **Confirmed even if the parent closes the app,** because Paystack notifies the school directly as well.
- **Refund through Paystack** from the receipt page. It's only marked refunded once Paystack confirms the money went back.
- **School Admin only** can connect or change where the money goes.

EXAMPLE

It's 10pm on a Sunday. Mrs Lawal pays ₦120,000 for her two children's Third Term fees by bank transfer from her sofa. Monday morning the bursar finds both payments already recorded, receipted and applied, and nobody queued at the bursary.

WHO USES IT

Parents · Bursar · School Admin

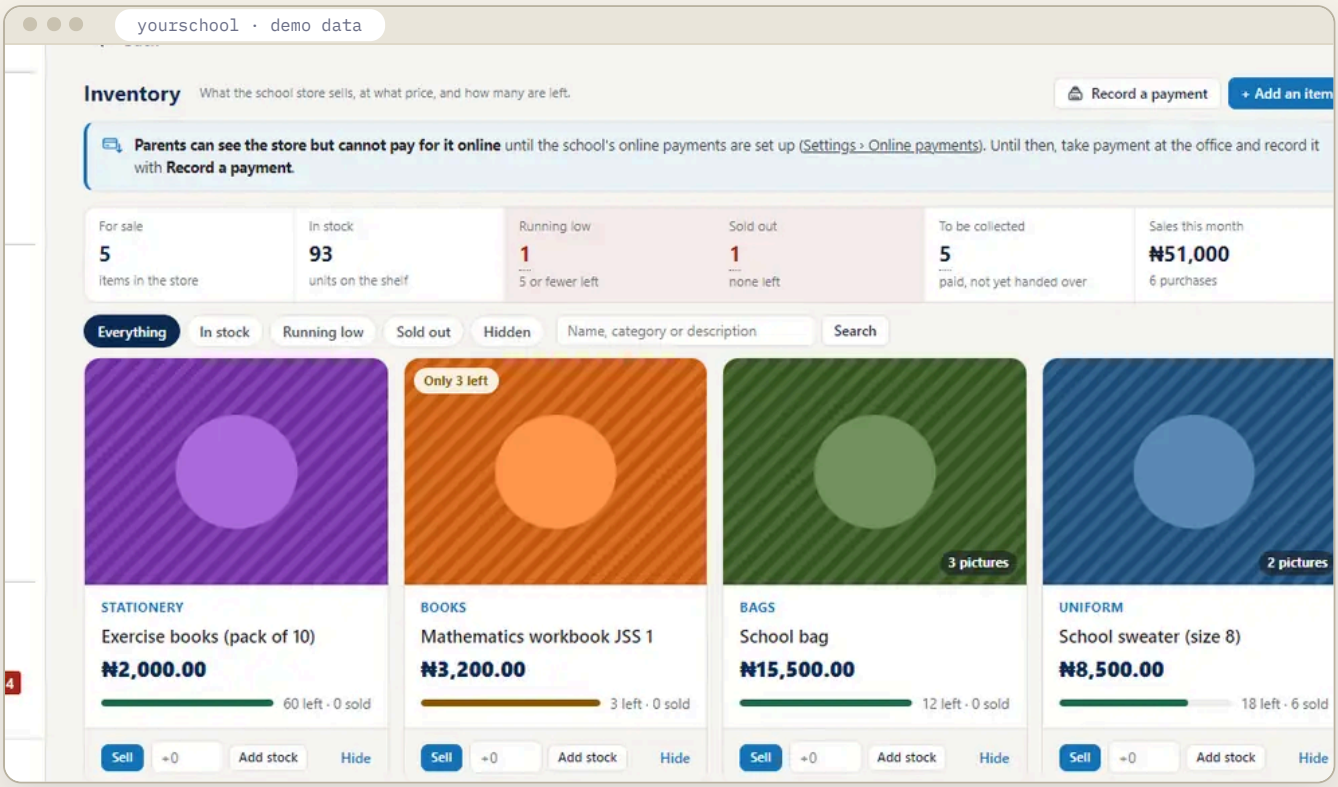

WHY IT MATTERS

Faster collections, less cash on the premises, and parents who can pay whenever suits them.

FEATURE 20 · MONEY

The school store

Sell uniforms, books, bags and sportswear through the portal, track every item from shelf to hand-over, and keep store money apart from school fees.

A real screen from the demonstration school. All names and figures are sample data.

3
pictures per item

Auto
stock count after every sale

SMS
to parents when an item is collected

WHAT YOU CAN DO

- **Inventory cards** with price, category, description, up to three pictures, stock left and number sold.
- **Low stock and sold out** are flagged. Add stock with one click, or correct a miscount.
- **Hide an item** from parents without losing its sales history.
- **Sell at the counter:** cash, transfer or POS. Stock goes down instantly and a store receipt is issued.
- **Parents shop online** for any of their children, paying through Paystack where the school accepts it.
- **Purchase claims:** everything bought and waiting to be collected, then *Hand over* records who collected it.
- **Parents texted** with what was collected and by whom.
- **Sales on the Overview:** this month against last, weekly sales and best sellers.

EXAMPLE

Mrs Ojo buys two school sweaters (size 8) for her twins online. The store keeper sees the claim, hands them to the twins at closing time, and Mrs Ojo gets a text saying what was collected, and by whom.

WHO USES IT

Store Keeper · Bursar · Parents

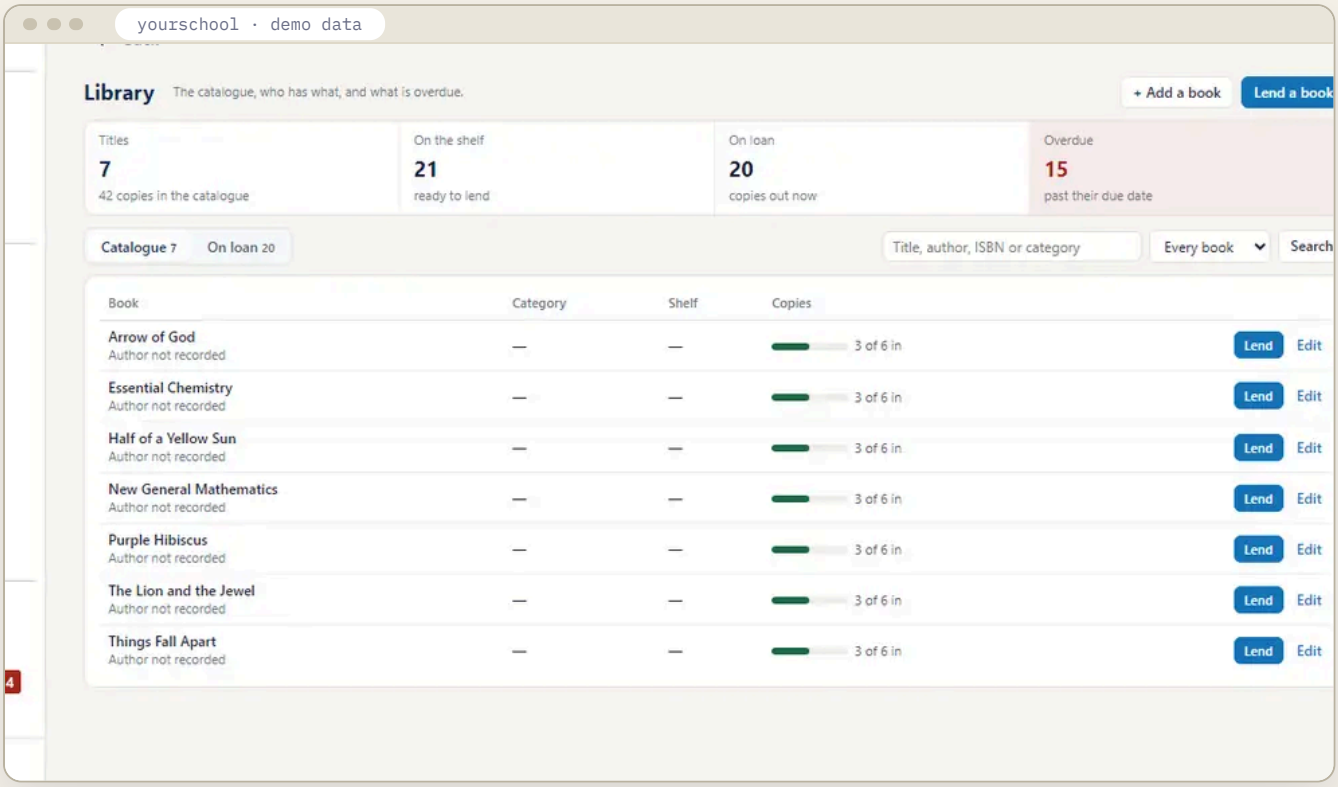

WHY IT MATTERS

Store sales stop being cash in a drawer. You know what you sold, to whom, and what's left.

FEATURE 21 · RESOURCES

The library

Every book, every copy, every loan: who has what, and what's overdue.

A real screen from the demonstration school. All names and figures are sample data.

4
figures: titles, on shelf, on loan, overdue

Auto
due dates from the loan length

Days late
shown on every overdue loan

WHAT YOU CAN DO

- **Catalogue:** title, author, ISBN, category and how many copies the school owns.
- **Four figures:** titles, copies on the shelf, copies on loan, and overdue.
- **Lend in seconds** to a student, found as you type, or a member of staff. The due date is set automatically from the loan length.
- **On loan view,** with overdue loans first, each marked with how many days late.
- **One-click return** puts the copy back on the shelf.
- **Add or remove copies** as books are bought, lost or damaged. Copies out on loan are always counted separately.
- **A book can't be archived** while a copy is still out.

EXAMPLE

The librarian lends *Things Fall Apart* to 30 SSS 2 students for two weeks. Three weeks later, the On loan tab shows four copies overdue by seven days, with the borrowers' names.

WHO USES IT

Librarian · School Admin

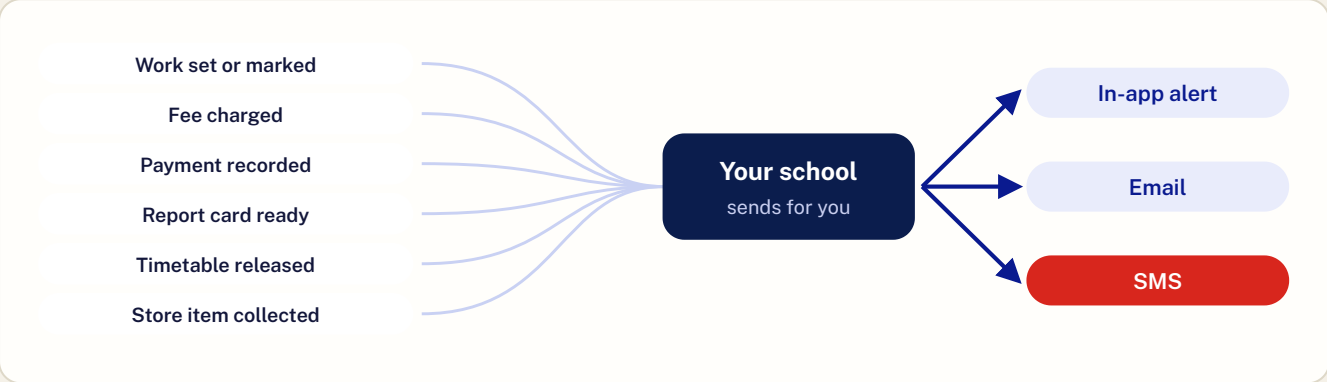

WHY IT MATTERS

Books stop disappearing, and the library becomes an asset you can actually manage.

FEATURE 22 · COMMUNICATION

Messages, notifications and reminders

Every conversation and every automatic notice in one place, so parents hear from the school before they think to ask.

7
kinds of automatic notice to families

3
states: open, in progress, resolved

2 days
birthday notice to teachers

HOW IT WORKS, STEP BY STEP

1. Connect your school's email and SMS once.
2. Work as normal: set work, bill, record payments, release.
3. Families are told automatically, in your name.
4. Check any family's notice log when someone asks.

WHAT YOU CAN DO

- **Staff inbox:** private messages between colleagues, with file attachments. Parents and students never see it.
- **Parent conversations** are marked Open, In progress or Resolved, with unanswered ones listed first. *I'll respond* shows who's handling each one.
- **Start a conversation** with any student's parent. The parent is told by email and SMS and replies from their portal.
- **Automatic notices** go out when work is set or marked, a fee is charged, a payment is recorded, a report card is ready, a timetable is released, and a store item is paid for or collected.
- **Notification bell** for staff alerts.
- **Birthday reminders:** two days before a student's birthday, their teachers get a reminder.
- **Notice log:** every email and text the school tried to send, and whether it arrived.

EXAMPLE

A reminder pops up for Mr Ola: *Ada Obi (JSS 1) turns 12 on Fri 11 Oct.* On Friday his class sings for her. Her mother, who never knew the school tracked birthdays, mentions it at the next PTA meeting.

WHO USES IT

All staff · Parents

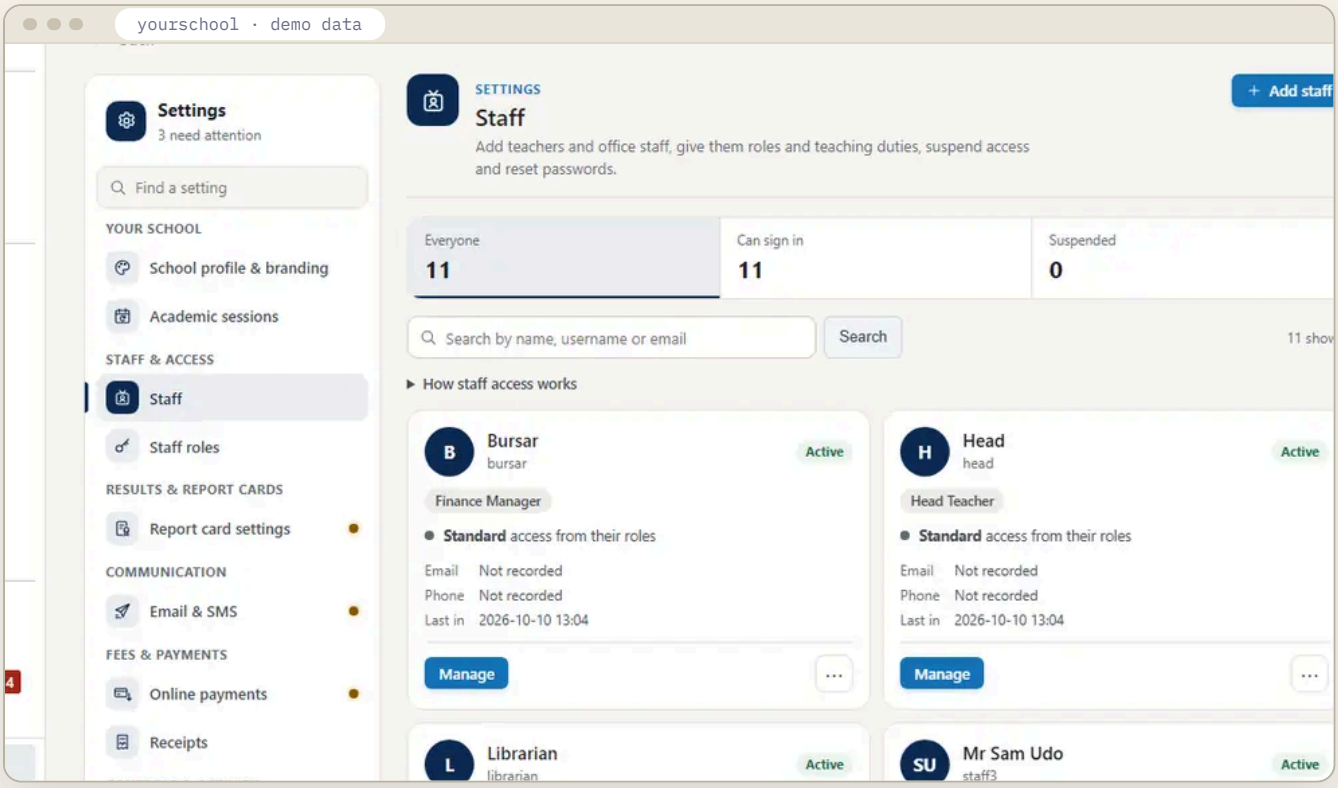

WHY IT MATTERS

Communication becomes reliable and recorded, and the small touches make families feel known.

FEATURE 23 · RUNNING THE SCHOOL

Staff accounts

Everyone who works at your school gets their own account, on a card that says in plain words what they can reach.

A real screen from the demonstration school. All names and figures are sample data.

Instant
suspension, even mid-session

0
passwords anyone can look up

Plain words
summary of each person's access

WHAT YOU CAN DO

- **Staff cards:** name, username, active or suspended, roles, contact details, last sign-in and a plain-English summary of their access.
- **Filters and search** by everyone, can sign in or suspended, or by name, username and email.
- **One staff form with tabs:** Profile, Roles, Teaching duties and Limits, plus Overrides for the School Admin.
- **Suspend instantly.** A suspended person's sign-in stops immediately, and their record stays.
- **Reset a password** to a new one-time password, shown once and ready to print. Nobody, not even the School Admin, can see anyone's password.
- **Signatures and photos** for every staff member.
- **Who's online now:** see which staff, students and parents are signed in.

EXAMPLE

A teacher resigns on Friday afternoon. The School Admin opens her card, chooses *Suspend*, and her access ends that second, while every mark she ever entered stays on record, with her name beside it.

WHO USES IT

School Admin

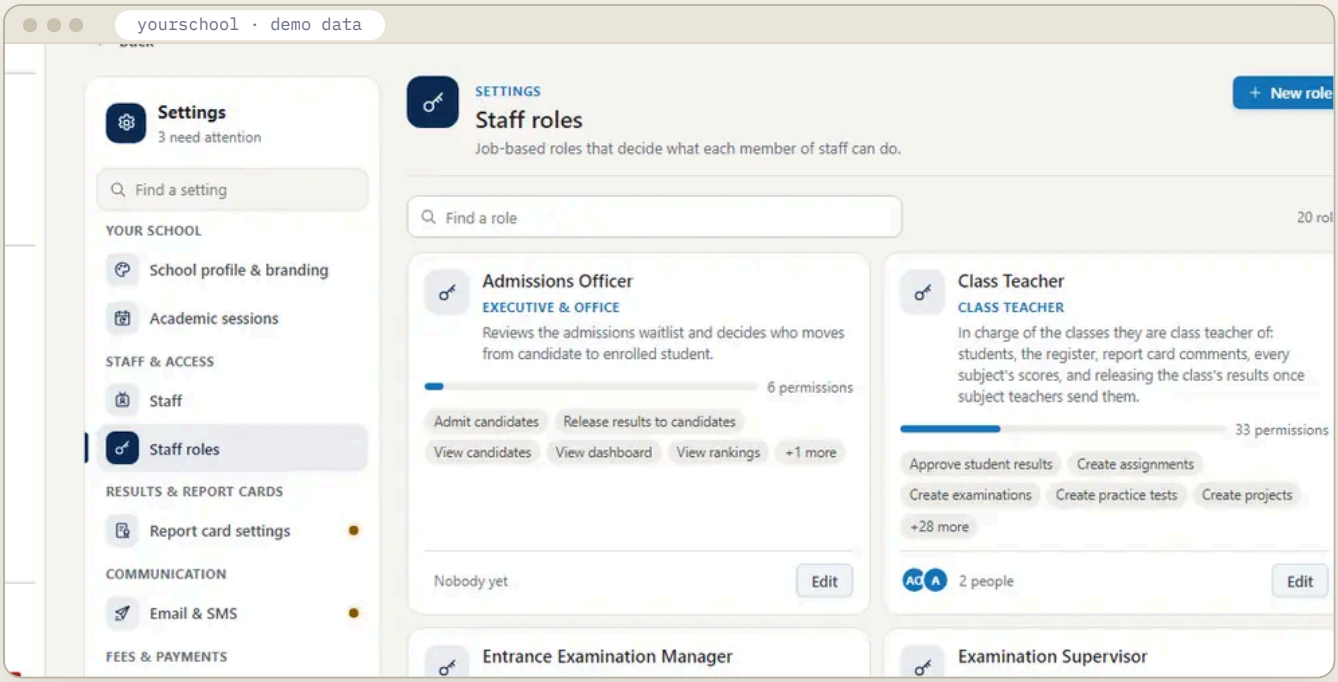

WHY IT MATTERS

You control exactly who can get in, and you can shut a door instantly when someone leaves.

FEATURE 24 · RUNNING THE SCHOOL

Roles, permissions and limits

Instead of 'admin' and 'not admin', every job in your school gets exactly the access it needs, and nothing more.

A real screen from the demonstration school. All names and figures are sample data.

19
ready-made roles

100+
individual permissions

4
areas reserved for the School Admin

WHAT YOU CAN DO

- **19 ready-made roles,** among them Head Teacher, Class Teacher, Subject Teacher, Finance Manager, Admissions Officer, Librarian, Store Keeper, Report Card Officer and Secretary.
- **Over 100 individual permissions,** grouped by area: view students, release results, record payments, release timetables and more.
- **Build your own role** by ticking permissions, with search and *Tick all* per area.
- **A chain of authority:** Proprietor, then executive and office staff, head teacher, class teacher and subject teacher.
- **Limits:** keep anyone to chosen classes, subjects, sessions or question banks, such as a Nursery head limited to Crèche and Nursery.
- **Overrides** for a single exception, without inventing a new role.
- **Four areas only the School Admin can touch:** staff and roles, Email and SMS, online payments, and the school profile.

EXAMPLE

The school wants a cashier who can record payments but must never see school-wide balances. The School Admin gives her a role that can record payments but not view school-wide finance. She records payments all day, and only ever sees her own takings.

WHO USES IT

School Admin

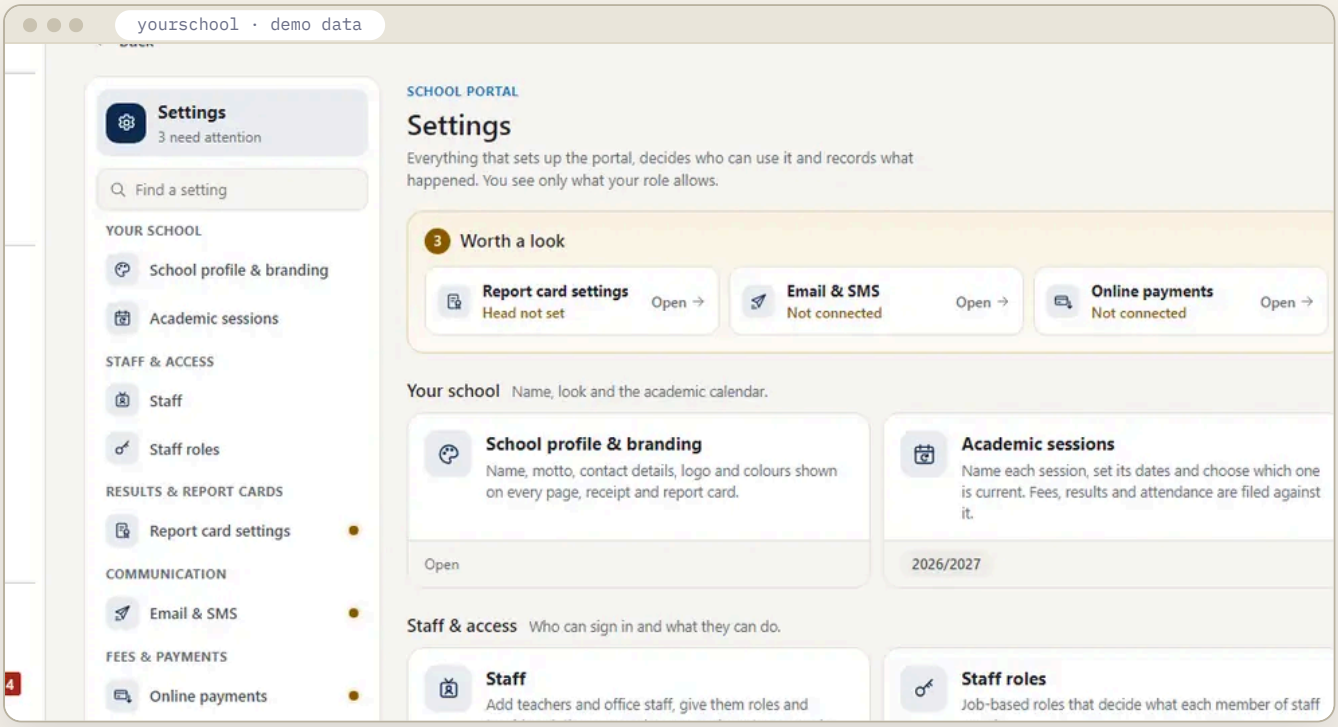

WHY IT MATTERS

Fewer mistakes, less temptation, and a clear answer to 'who could have done this?'

FEATURE 25 · RUNNING THE SCHOOL

Settings, branding and connections

One calm Settings area for everything that shapes your portal, with a 'Worth a look' list that tells you what still needs attention.

A real screen from the demonstration school. All names and figures are sample data.

2
brand colours, checked for readability

8
sign-in photographs

Test
buttons for email and SMS

WHAT YOU CAN DO

- **Worth a look:** anything unfinished, such as online payments not connected, the head's signature missing or alerts left open.
- **Find a setting** as you type. Each setting shows its state at a glance.
- **School profile:** name, motto, tagline, contacts, logo, two brand colours with a readability check, and up to eight sign-in photographs.
- **Email and SMS:** connect your own mail server and BulkSMS Nigeria account, with a test button for each.
- **Receipts and report cards:** authorised signature, receipt prefix, the head's title and signature, and how CA and exam are weighted.
- **Controls and alerts:** alerts, unread messages, a review queue of things raised automatically, and locks on subjects and question banks.
- **Academic sessions and class subdivisions** are set here too.

EXAMPLE

A new School Admin opens Settings for the first time. *Worth a look* shows three items. Twenty minutes later the head's signature is uploaded, SMS is connected and tested, and Paystack is linked.

WHO USES IT

School Admin · Head teacher

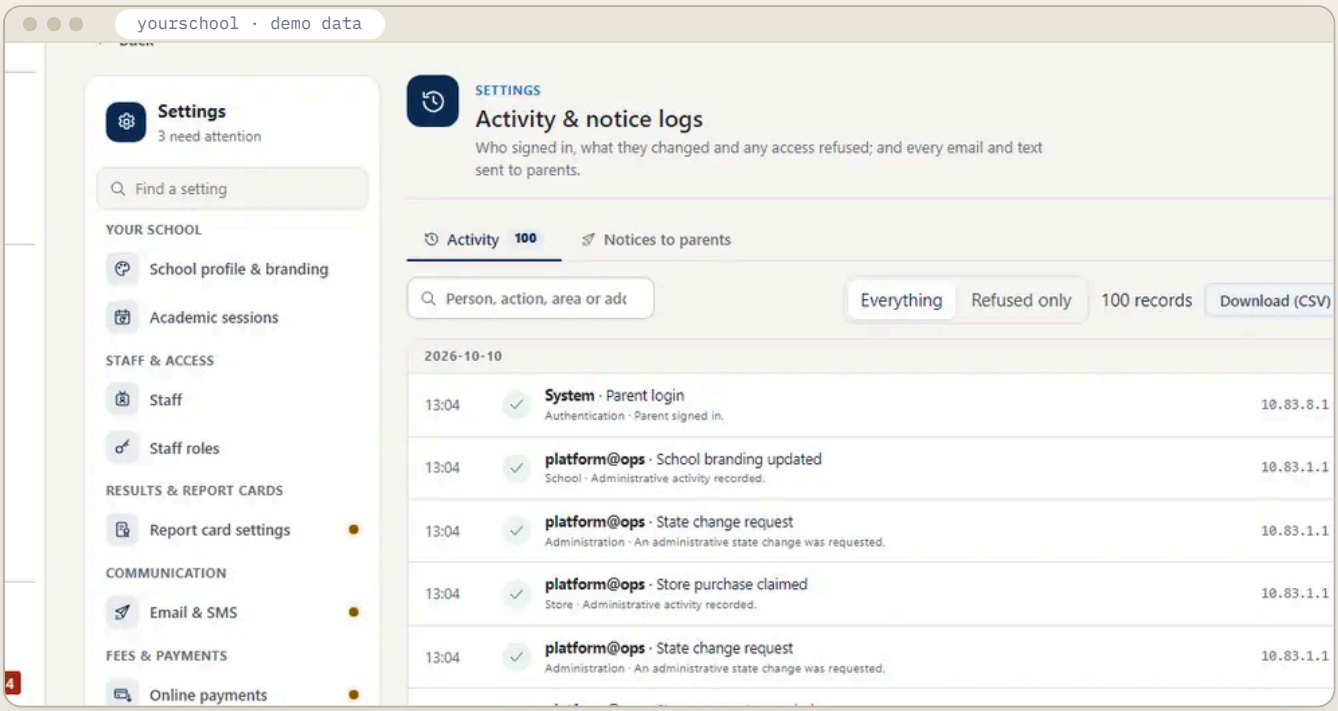

WHY IT MATTERS

Setup is guided, not guessed, and nothing important stays half-done without someone noticing.

FEATURE 26 · RUNNING THE SCHOOL

Activity and notice logs

A complete, searchable diary of who did what in your portal, and of every message sent to a family.

A real screen from the demonstration school. All names and figures are sample data.

Every
sign-in, change and refusal

50
records a page, searchable across all

CSV
download of the whole log

WHAT YOU CAN DO

- **Activity log:** who did it, what they did, to which record, from which internet address, and whether it was allowed.
- **Refused attempts are recorded too,** such as someone trying to open a page their role doesn't allow.
- **Notices to parents:** every email and text the school tried to send, and whether it got through.
- **Search everything:** a person, an action, a student, an email address or a phone number.
- **Refused only and Not delivered** filters show just what went wrong.
- **Fifty at a time,** newest first and grouped by day, with Older and Newer to page through.
- **Download the activity log** as a spreadsheet.

EXAMPLE

A parent insists her son's Mathematics mark changed after release. The head searches the log for the student: the mark was entered by Mr Tunde on 2 March, approved on 4 March, released on 5 March, and never touched again.

WHO USES IT

School Admin · Head teacher

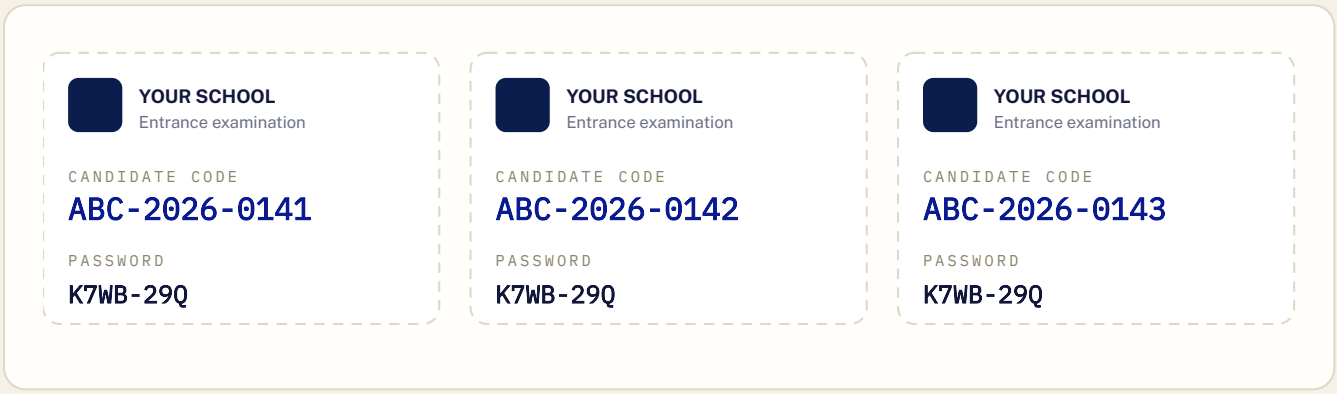

WHY IT MATTERS

Disputes are settled with facts, not memories, and staff know their actions are on record.

FEATURE 27 · ENTRANCE EXAMINATION

Candidates and credentials

Register every applicant, print their exam login slips, and follow each one from registration to admission.

1 min
to register a candidate

Batch
printing of login slips

Your
own candidate-code pattern

HOW IT WORKS, STEP BY STEP

1. Register each candidate and their target class.
2. Print the login slips in one batch.
3. Hand out slips with the exam date.
4. Reset a lost slip's password in seconds.

WHAT YOU CAN DO

- **Register candidates** with their target class (Year 7/JSS 1 or SSS 1), guardian contacts and photo. Each gets a candidate code using your school's own pattern.
- **Print credentials:** neat login slips with the candidate code and password, one or many at a time.
- **Reset a candidate's password** if a slip is lost.
- **SSS departments:** SSS 1 candidates choose Science, Art or Commercial when registering.
- **A candidate's own page** shows their papers, scores, department breakdown and admission status.
- **Result image:** a single branded picture of the candidate's overall result, ready to share.
- **Retakes** granted by authorised staff, one paper at a time.

EXAMPLE

On registration day, 180 families queue. The admissions officer registers each child in under a minute, prints all 180 login slips in one go, and hands them out with the exam date.

WHO USES IT

Admissions officer · Entrance Examination Manager

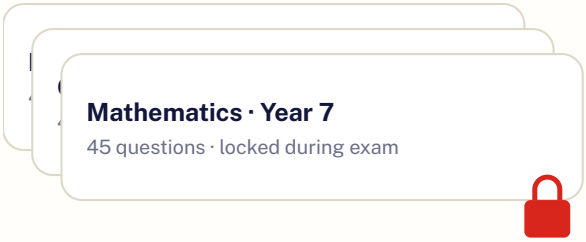

WHY IT MATTERS

Admissions season runs like a well-organised office, with no handwritten lists.

FEATURE 28 · ENTRANCE EXAMINATION

Question banks and entrance practice

Start with 255 ready-made entrance questions, add your own, and give families a free practice page that brings them to your school.

PUBLIC PRACTICE PAGE

yourschool…/entrance-practice

No sign-up. Last year's paper or a practice bank, never the live one.

255
standard entrance questions included

6
starter banks, Year 7 and SSS 1

0
sign-ups needed to practise

HOW IT WORKS, STEP BY STEP

1. Start with the standard banks, or import your own.
2. Set up the live papers in one click.
3. Lock the banks while the exam runs.
4. Share your practice link on social media and your website.

WHAT YOU CAN DO

- **Standard banks included:** Mathematics, English and General Knowledge for Year 7/JSS 1 and SSS 1, written for the platform and independently checked.
- **Bring your own questions:** import a file, or write questions with pictures and instructions.
- **Reorder, edit and export** a bank to keep a copy outside the portal.
- **Department tags** for SSS questions, so every candidate gets a fair share from Science, Art and Commercial.
- **Exam configuration:** choose which bank is the live paper for each class and subject, in one click for the standard set.
- **Lock a bank** during a live exam so nobody can change it mid-way.
- **Public entrance practice:** anyone can practise with no sign-up, using last year's paper or a practice bank. The upcoming paper is never shown.

EXAMPLE

A father in Lagos finds your school's practice link on Instagram. His daughter tries the JSS 1 Mathematics practice paper that evening, sees your crest and colours throughout, and registers for the real exam the next morning.

WHO USES IT

Entrance Examination Manager
Question Bank Manager
Families

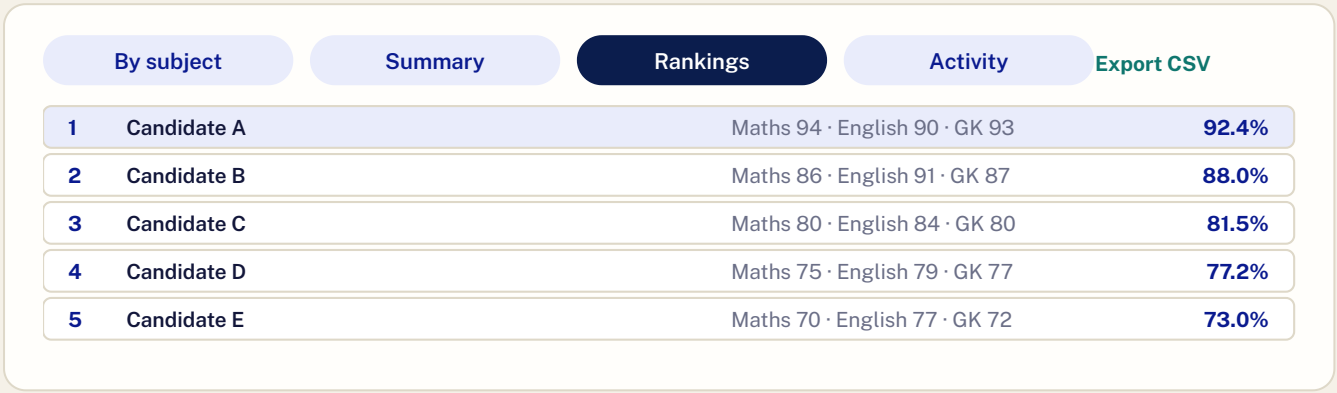

WHY IT MATTERS

You can run an entrance exam on day one, and the practice page markets your school to every family that tries it.

FEATURE 29 · ENTRANCE EXAMINATION

Exam day, results and rankings

Candidates sit timed papers on any computer. When the last one finishes, every script is marked, every candidate ranked, and the results are ready to export.

3
papers, any order, each timed

5 min
most time given back after an outage

4
results views, exportable

HOW IT WORKS, STEP BY STEP

1. Candidates sign in with their slips.
2. They sit three timed papers in any order.
3. Every script is marked the moment it ends.
4. Export the rankings for your board the same day.

WHAT YOU CAN DO

- **Three papers, any order,** each with its own timer, and each taken once unless a retake is granted.
- **One question at a time,** with a question map, a server-kept clock and answers saved on *Save & Next*.
- **Power cut protection:** if a candidate's connection drops, the clock gives back the lost time, up to five minutes.
- **Results in four tabs:** By subject, Summary (printable), Rankings and Examination activity.
- **Rankings:** every candidate ordered by overall score, exportable as a spreadsheet.
- **Examination activity:** a plain record of every paper started, by whom, when and what happened, for checking a single sitting.
- **Results stay private** until the school releases them.

EXAMPLE

On Saturday at 9am, 180 candidates sit three papers across two computer rooms. At 12:40 the last paper is submitted. At 12:41 the admissions officer exports the rankings to share with the board.

WHO USES IT

Entrance Examination Manager
Examination Supervisor
Admissions officer

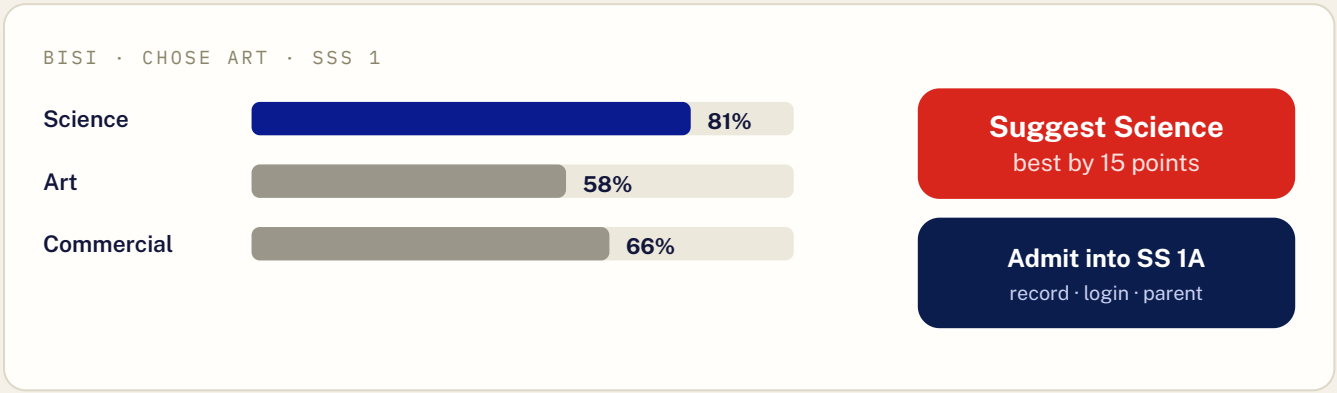

WHY IT MATTERS

The admissions decision is ready the same afternoon, not three weeks later.

FEATURE 30 · ENTRANCE EXAMINATION

Admissions and department advice

A ranked waitlist and a single click turn a successful candidate into an enrolled student, and the platform even suggests the best SSS department.

1 click
from candidate to enrolled student

3
departments compared for SSS

Undo
for declines, any time

HOW IT WORKS, STEP BY STEP

1. Open the waitlist, ranked by score.
2. Check the department advice for SSS candidates.
3. Admit, choosing the class and department.
4. Release the result, and the family sees the new login.

WHAT YOU CAN DO

- **Ranked waitlist** of everyone who sat at least one paper, filterable by entry level and decision.
- **Department advice for SSS:** how each candidate did on Science, Art and Commercial questions, with a suggested department and the reason.
- **Your choice wins:** the suggestion is only a suggestion. Choose any department before confirming.
- **One-click admit:** creates the student record, a class place (balanced across arms), the admission number, a login and, optionally, the parent account.
- **Decline with a reason,** and undo it at any time.
- **Release to the candidate:** once released, the candidate sees the decision, their score and their new student login.
- **One permission decides:** only Admissions Officers see the waitlist by default, and can be limited to one entry level.

EXAMPLE

Bisi chose Art, but scored 81% on the Science questions against 58% on Art. The waitlist shows *Suggest Science* with the reasons. The principal discusses it with her parents, who agree, and she is admitted into SS 1A (Science).

WHO USES IT

Admissions officer · Principal

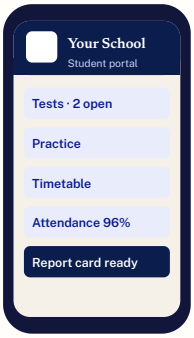

WHY IT MATTERS

Fair, explainable admissions, and a new family fully set up in the portal before they leave the office.

FEATURE 31 · PORTALS

The student portal

Everything a student needs for school, on their phone or a computer, in your school's colours.

- Assignments with due dates
- Tests and examinations
- Unlimited practice
- Exam timetable (PDF)
- Attendance history
- Results and report cards
- Menu bar on phones
- What's new for students

6
menu areas: home, tests, exams, practice, timetable, attendance

∞
practice attempts

Phone
menu bar along the bottom

HOW IT WORKS, STEP BY STEP

1. The school creates the student's account.
2. The student signs in and chooses a password.
3. They install the portal on their phone.
4. Work, tests, practice and results are all in one place.

WHAT YOU CAN DO

- **Home:** their work and results at a glance, plus what's new.
- **Assignments and projects** with due dates, status and scores side by side.
- **Tests and examinations** listed with their number of questions and minutes, and an Open button.
- **Practice** as often as they like, in a new order every time, never counted.
- **Exam timetable** for their own class, as a PDF.
- **Attendance** history and term summary.
- **Results and report cards,** once released, ready to download.
- **A phone-friendly menu** along the bottom, and the timer only starts when they begin.

EXAMPLE

Before her Biology test, Amaka takes the Biology practice test four times on the bus. Each time the questions come in a different order. On test day she scores 88%, and the practice attempts were never recorded.

WHO USES IT

Students (Primary 1 and up)

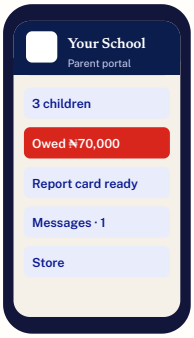

WHY IT MATTERS

Students take ownership of their learning, and practice without fear of it counting against them.

FEATURE 32 · PORTALS

The parent portal

Every child, every fee, every result and every message, on the parent's phone.

- Every child in one table
- Fee account and receipts
- Pay online, any amount
- Results and report cards
- Attendance and timetable
- Messages with the school
- The school store
- Kept after a child leaves

All
children in one table

Online
payment for any amount owed

Kept
access after a child leaves

HOW IT WORKS, STEP BY STEP

1. The school links the parent to their children.
2. The parent signs in and chooses a password.
3. They install the portal as an app.
4. Fees, results, messages and the store, any time.

WHAT YOU CAN DO

- **All children in one table:** what each owes, their average and their progress, with Profile, Message and Pay beside each name.
- **Fee account** by session: charges, payments, receipts to download, and the balance, including other sessions.
- **Pay online** for one fee or several, for any child.
- **Results and report cards** the moment they're released.
- **Attendance and the exam timetable** in a pop-up from the child's page.
- **Messages** with the school, with replies from named staff.
- **The store:** browse, buy and track collection.
- **A child who has left** stays visible to parents, with their records and fee account.

EXAMPLE

Mr Danjuma works in Abuja while his children school in Jos. He checks their attendance on Monday, pays Second Term fees on Wednesday, and downloads their report cards in April, without a single trip or phone call.

WHO USES IT

Parents and guardians

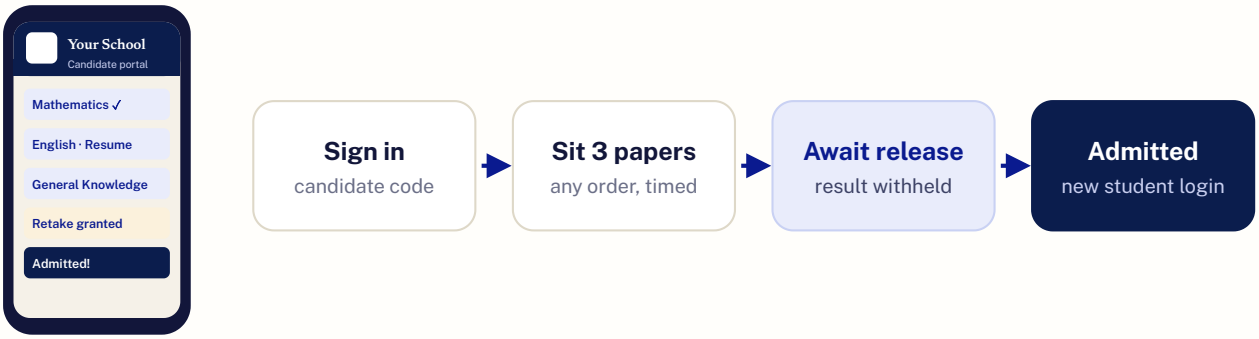

WHY IT MATTERS

Parents feel close to their children's schooling, and that confidence is why families stay and recommend you.

FEATURE 33 · PORTALS

The candidate portal

Entrance candidates get a simple portal of their own: their papers, their timer, and, once the school releases it, their result and new student login.

3
papers with their own timers

Private
results until the school releases them

Instant
student login on admission

HOW IT WORKS, STEP BY STEP

1. Get a login slip at registration.
2. Sign in on exam day.
3. Sit the three papers.
4. Sign in again later to see the decision and the new student login.

WHAT YOU CAN DO

- **Sign in with the candidate code** on their printed slip.
- **See their three papers,** each marked Start, Resume or Completed.
- **Take papers in any order,** each with its own timer, once each.
- **Retakes appear** automatically when the school grants one.
- **Results withheld until release.** The candidate sees 'The school will provide your result' until the school says otherwise.
- **Admitted?** The candidate sees the congratulations, their score, and their new student login and one-time password.

EXAMPLE

Two weeks after the exam, Chidi signs back in with his candidate code and sees *Congratulations, you have been admitted*, with his new student login underneath. He signs in as a JSS 1 student the same evening.

WHO USES IT

Entrance candidates and their families

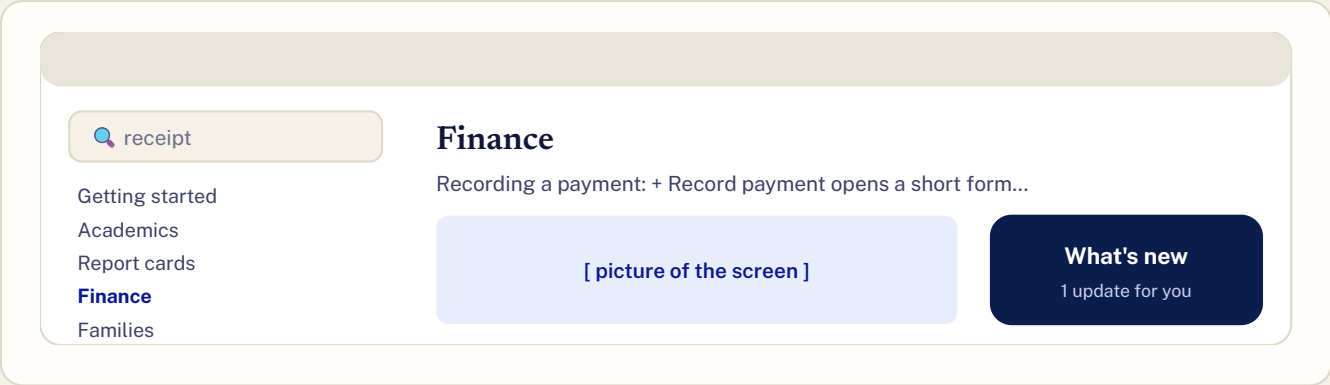

WHY IT MATTERS

The applicant's very first experience of your school is modern, clear and fair.

FEATURE 34 · SUPPORT

Help built in

Your staff are never left guessing. The portal explains itself, announces its own improvements and walks new schools through setup.

16
guide pages with real screen pictures

Search
across every page, not just titles

3
audiences for What's new

HOW IT WORKS, STEP BY STEP

1. Open Guide in the top bar.
2. Search a word, or browse by area.
3. Follow a link straight to the real page.
4. Read What's new when the portal improves.

WHAT YOU CAN DO

- **Staff guide inside the portal:** plain-language pages with pictures of the real screens, grouped by Getting started, Academics, Finance and families, Running the school, and Entrance.
- **Search the guide:** type 'receipt' or 'attendance' to search every page, not just titles.
- **Links to the real pages,** so you never have to guess where a button is.
- **What's new:** each improvement explained in plain words to staff, parents and students, each seeing only what concerns them.
- **Set up your school** checklist: review classes, add subjects, enrol students, set up fees, then optional steps such as the library and store.
- **The version** you're running is shown on the sign-in page.

EXAMPLE

A new bursar joins mid-term. Instead of a week of shadowing, she reads the Finance pages of the guide on her first morning, with pictures of each screen, and records her first payment before lunch.

WHO USES IT

All staff · Parents · Students

WHY IT MATTERS

Less training time and fewer support calls. New staff are productive from their first day.

PART THREE · IN DEPTH

Security *made simple.*

How Brightstars protects your school, your children's information and your money, explained without jargon, with an everyday comparison and an example for every safeguard.

01	Security at a glance	58
02	Every school is its own house	59
03	Passwords and signing in	60
04	Only the right people see the right things	61
05	A record of everything	62
06	Exams that can't be gamed	63
07	Money you can trust	64
08	Children's photos and files	65
09	Your messages and secret keys	66
10	Safe in the browser and on shared devices	67
11	Our team and your data	68
12	Built not to lose your work	69
13	Security questions	70

SECURITY 01 · AT A GLANCE

Sixteen ways your school is protected.

The pages that follow explain each protection in everyday language, with an example from school life. Here they are on one page, for the busy proprietor.

Own database per school
Your records are never stored alongside another school's.

Own web address
Sign-ins from one school are rejected at another.

Scrambled passwords
Nobody can read a password, only reset it.

Guessing slowed
Paused after 8 wrong tries in 5 minutes.

100+ permissions
Each job sees only what it needs.

Admin-only areas
Staff, roles, payments and branding stay with the School Admin.

Activity log
Who, what, when and from where, refusals included.

Fair exams
Answers never reach the candidate's device.

Verified payments
Every online payment confirmed with Paystack.

Void, never delete
Corrections always leave a trail.

Guarded photos
Children's pictures only for staff, the child and their parents.

Encrypted secrets
Mail, SMS and Paystack keys sealed per school.

Nothing left on phones
The app never stores private pages.

No trackers
No ads, analytics or outside scripts.

Recorded support visits
Our team's visits appear in your log.

NDPR-aligned
Written to align with Nigeria's Data Protection Act 2023.

Security isn't an extra. It's how the platform is built.

None of this costs extra or needs switching on. Every school gets every protection from the moment it's created.

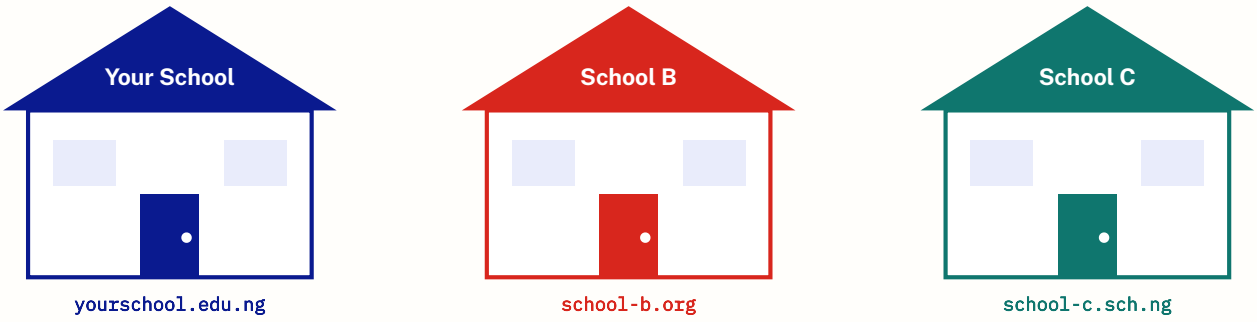

SECURITY 02

Every school is its own house

Many school systems put every school's records in one big shared database and rely on a label to keep them apart. One mistake in the software, and one school can see another's children. Brightstars is built the other way round.

Think of it like this: A block of flats vs. separate houses

In a shared system, every school lives in one block of flats. The doors are locked, but they open onto the same corridor. With Brightstars, every school gets its **own house on its own plot**, with its own front door, its own keys and its own filing cabinets. There is no shared corridor to wander down.

1
private database per school

1
private file folder per school

0
shared corridors between schools

HOW IT PROTECTS YOUR SCHOOL

- **A private database for each school.** Your students, results, fees and messages are stored in a database that belongs to your school alone.
- **A private folder for each school's files:** photographs, signatures, question pictures and logos.
- **Your own web address.** The portal works out which school you are from the address you visit, and never from anything a user types.
- **Keys don't work next door.** A sign-in issued by one school's portal is rejected if it's ever presented at another school's.
- **It stops rather than guesses.** If the system can't be certain which school a request belongs to, it refuses it. It never falls back to a default.
- **Unknown addresses go nowhere.** An address that isn't a registered school gets a 'not found' page before any school data is touched.

EXAMPLE

Two schools on the platform both have a JSS 1 student called Ada Obi. They are two different children in two different databases, and there is no screen, search or mistake that could show one school the other Ada's results.

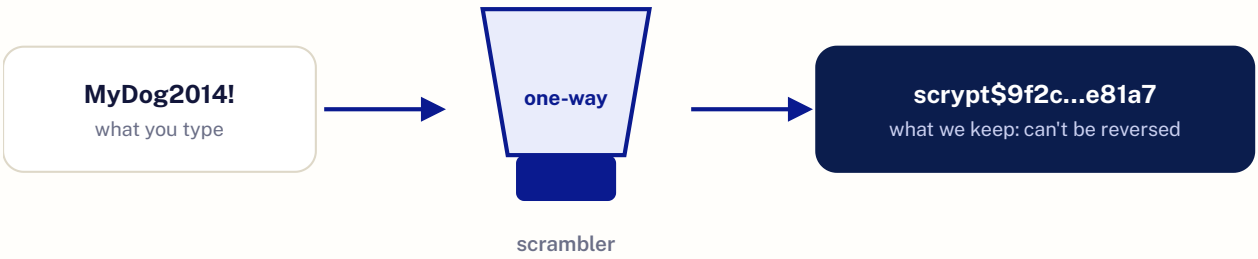

SECURITY 03

Passwords and signing in

Most break-ins start with a stolen or guessed password. These protections make that very hard.

Think of it like this: A blender, not a safe

We never keep your password. We put it through a one-way **scrambler**, like a blender. You can turn fruit into a smoothie, but you can't turn the smoothie back into fruit. When you sign in, we blend what you typed and compare the two smoothies. Even our own team can't read a password back.

8
wrong tries in 5 minutes pause sign-in

30 min
lifetime of a single-use reset link

All
other devices signed out on a password change

HOW IT PROTECTS YOUR SCHOOL

- **Passwords are scrambled one way** and never stored in readable form. Nobody, not the School Admin and not Brightstars staff, can look one up. They can only reset it.
- **Every account starts on a one-time password** that must be changed at first sign-in, before anything else opens.
- **Guessing is slowed down.** After eight wrong tries within five minutes, that sign-in is paused for a while. Password-reset requests are limited too.
- **Reset links** are sent only to the email on file, work once, expire after 30 minutes, and cancel any earlier link.
- **No hints for snoopers.** 'Forgot password' gives the same reply whether or not an account exists.
- **Changing a password signs out every other device** at once, such as a phone left at home or a laptop in the staff room.
- **Suspended staff and archived students** are stopped immediately, even if they were already signed in.

EXAMPLE

A teacher's phone is stolen with the portal signed in. She borrows a colleague's phone, changes her password, and the thief's session ends at that moment, before they can open a single record.

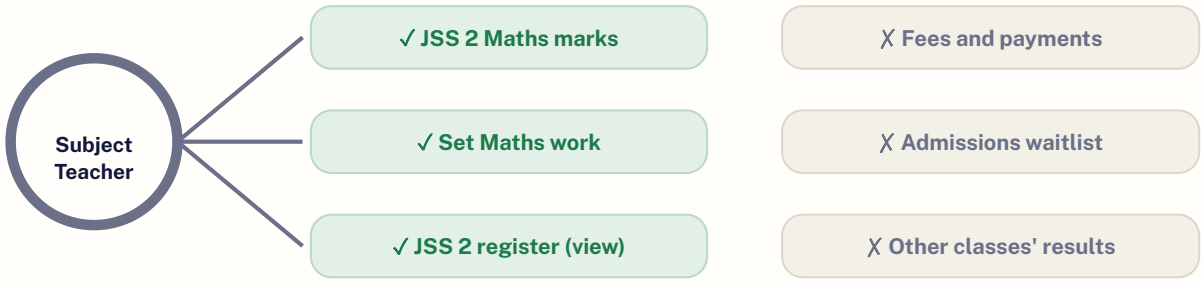

SECURITY 04

Only the right people see the right things

Most school data leaks aren't hackers. They're the wrong person inside the school seeing something they shouldn't. Brightstars gives every person access to exactly their job, and nothing more.

Think of it like this: Keys on a key ring

A caretaker's key ring opens the store room, not the bursar's safe. Each role in Brightstars is a **key ring**. The Subject Teacher ring opens marks for their own subjects in their own classes. It doesn't open fees, admissions or anyone else's class.

100+
separate permissions

4
areas only the School Admin controls

0
ways to grant yourself more access

HOW IT PROTECTS YOUR SCHOOL

- **Over 100 separate permissions** instead of a single 'admin' switch. Viewing the admissions waitlist and deciding admissions are even two different permissions.
- **Teaching duties narrow every screen.** A teacher only sees the students, subjects and marks of the classes they teach.
- **Parents see only their own children.** Students see only themselves.
- **Nobody can promote themselves.** Staff, roles, Email and SMS, online payments and the school profile are for the School Admin alone, and can never be handed to another role.
- **Two workspaces kept apart.** Someone working in the entrance exam can't wander into school records by accident, and an attempt is logged.
- **Private until released.** Results, report cards, timetables and candidate outcomes stay invisible to families until a person with the right permission releases them.
- **Cashiers see only what they recorded,** not the school's whole financial position.

EXAMPLE

A new subject teacher for JSS 2 Mathematics signs in. She can enter JSS 2 Maths marks and set Maths work, and that's all. The fees page, other classes' results and the admissions list simply aren't there for her.

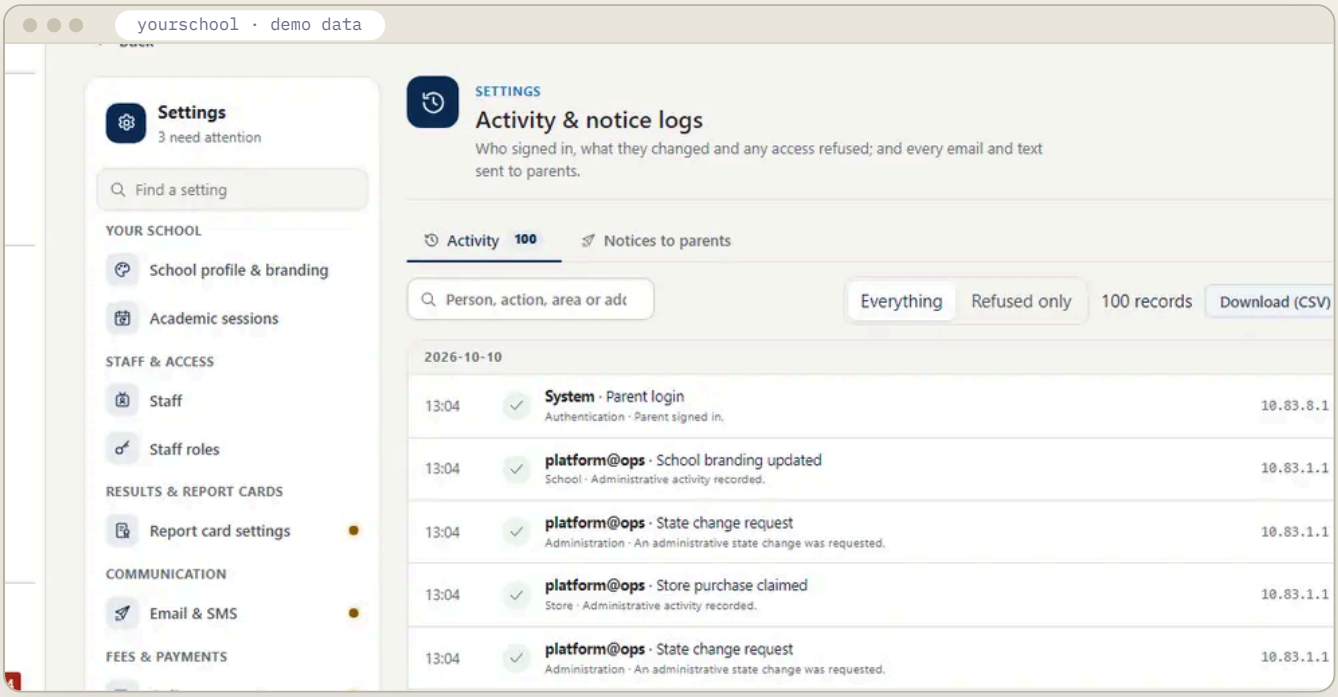

SECURITY 05

A record of everything

When something goes wrong, the first question is always 'who did this?'. Brightstars can always answer it.

Think of it like this: CCTV for your records

The activity log works like a **CCTV camera** pointed at your records, except it doesn't need rewinding. Search a name or a student and see every action, by whom, when and from which internet connection, including people who tried a door that was locked.

A real activity log from the demonstration school. Platform support visits appear as platform@ops.

Who
what, when and from which address

Refusals
recorded, not just successes

CSV
export for your records

HOW IT PROTECTS YOUR SCHOOL

- **Every important action is recorded:** sign-ins, record changes, releases, payments, voids, imports and account changes.
- **Refused attempts are recorded too,** so you can see who tried to open what they shouldn't.
- **Who wrote it:** report card comments and trait ratings carry the name of whoever last changed them.
- **Money is never erased.** A wrong payment is voided with a reason, and both the payment and the void stay visible.
- **Every message to families** is logged with whether it was delivered.
- **Searchable and downloadable:** find any person, action or student, and export the log as a spreadsheet.

EXAMPLE

₦40,000 seems to be missing from March's takings. The log shows the payment was voided on 14 March by the cashier, with the reason 'entered twice'. The duplicate is right there with the same receipt reference. Mystery solved in two minutes.

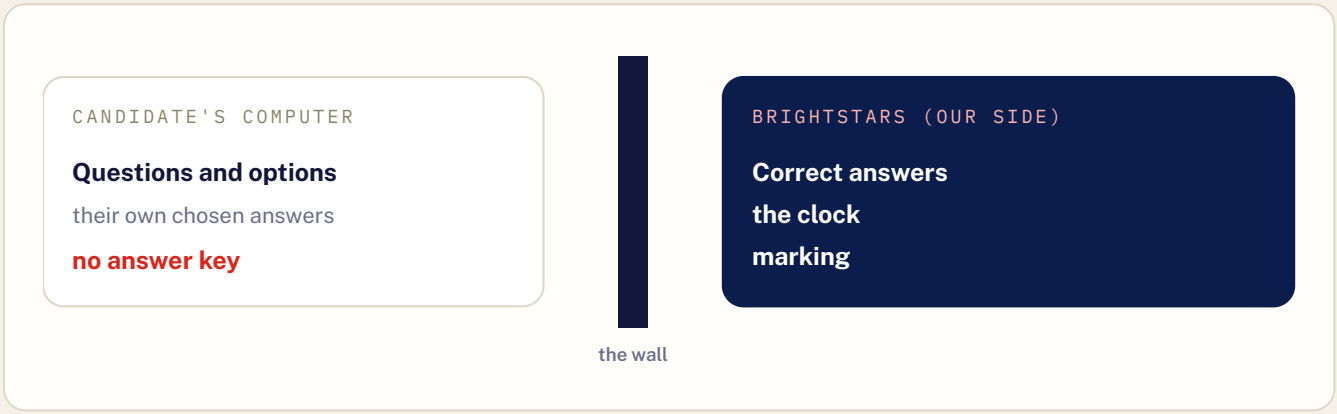

SECURITY 06

Exams that can't be gamed

An entrance exam or end-of-term paper is only worth something if it's fair. Brightstars closes the usual loopholes.

Think of it like this: The answers stay in the examiner's office

In a paper exam, the marking scheme never leaves the examiner's office. Brightstars works the same way. **The correct answers never travel to the candidate's computer.** There's nothing on the screen, in the page or in the browser for a clever student to dig out. Marking happens on our side.

0
answer keys sent to the candidate's device

5 min
maximum outage allowance

1
attempt per paper unless staff grant a retake

HOW IT PROTECTS YOUR SCHOOL

- **Correct answers never reach the candidate's device,** and exam pages are never stored by the browser.
- **The clock is kept by the system,** not the candidate's computer. Changing the computer's time does nothing, and time up means the paper is submitted automatically.
- **Fair allowance for power cuts:** time lost to a real outage is given back, but never more than five minutes in total, so a deliberate disconnection can't buy a long break.
- **Questions in a different order** for each candidate, so copying a neighbour doesn't help.
- **Each paper once.** A retake has to be granted by staff, and the grant is recorded.
- **Frozen papers:** each attempt keeps its own copy of the questions, and banks can be locked during a live exam.
- **Practice never leaks the real paper.** Practice uses last year's paper or a practice bank, never the paper about to be sat.
- **Results stay private** until the school releases them.

EXAMPLE

A candidate sets the computer's clock back by half an hour, hoping for extra time. Nothing changes. His time left comes from Brightstars, not from the computer, and when it reaches zero the paper is submitted automatically, already marked.

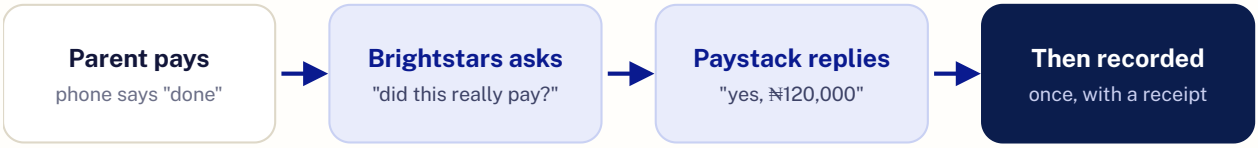

SECURITY 07

Money you can trust

School fees are the lifeblood of a private school. Every naira is protected from mistakes, duplicates and tampering.

Think of it like this: Ask the bank, not the customer

When a customer says 'I've paid', a careful shopkeeper checks with the bank. Brightstars does the same. **Every online payment is confirmed by asking Paystack directly**, never just because a phone or browser says it went through.

A double tap or a retried request goes back to the same checkout and never charges twice.

1
charge, however many times Pay is pressed

Verified
with Paystack, every time

0
payments silently deleted

HOW IT PROTECTS YOUR SCHOOL

- **Straight to your account.** Online payments go to your school's own Paystack account. There's no platform middleman holding your money.
- **Confirmed with Paystack itself** before anything is recorded, and even if the parent closes their phone mid-payment.
- **Double-tap safe.** Pressing Pay twice, or a slow network repeating a request, never creates a second charge or a second record.
- **Refunds marked only when real:** a refund is recorded only once Paystack confirms the money actually went back.
- **Void, never delete:** corrections leave a trail.
- **Unapplied money is impossible to ignore:** a banner stays on every finance page until every payment is matched to a fee.
- **Billing can't double-charge:** re-running a class bill skips anyone already charged.
- **Your payment keys are encrypted** and never shown again once saved.

EXAMPLE

A parent on a weak 3G connection presses Pay, sees nothing happen, and presses again. Brightstars recognises the second press as the same payment and takes her back to the same Paystack checkout. She's charged once, and the bursar sees one payment.

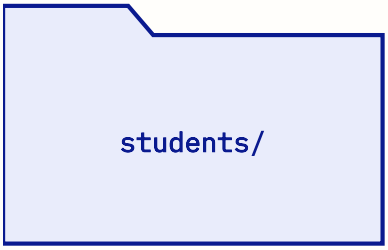

SECURITY 08

Children's photos and files

Photographs of children are some of the most sensitive things a school holds. Every uploaded file has a rule about who may open it, checked every single time.

Think of it like this: A guest list at the door

Every folder of files has its own **guest list**. A student's photograph lets in staff, that student and their linked parent, and nobody else. The list is checked at the door on every visit, not once at the start.

GUEST LIST · A STUDENT PHOTO

✓ Staff of the school
✓ The student it belongs to
✓ Parents linked to that student
✗ Everyone else, checked on every visit

20
random characters in every file name

5 MB
upload limit, images only

Every
visit checked against the guest list

HOW IT PROTECTS YOUR SCHOOL

- **Student photos:** staff, the student and their linked parents only.
- **Staff photos and signatures:** staff only.
- **Candidate photos:** staff and that candidate only.
- **Message attachments** only through a permission-checked download.
- **Unguessable file names:** every file name ends in 20 random characters, so nobody can guess their way to a picture.
- **Only pictures, only reasonable sizes:** uploads are checked for type (PNG, JPG, GIF, WEBP) and size, before and after sending.
- **Kept in your school's own folder,** never a shared one.

EXAMPLE

A curious student copies the web address of his own photo and changes a few letters, hoping to see a classmate's. He gets nothing. The names can't be guessed, and even a correct one would be refused because it isn't his.

SECURITY 09

Your messages and secret keys

Your school's email password, SMS token and Paystack key are the keys to sending messages and taking money in your name. They're locked away accordingly.

Think of it like this: A sealed envelope only your school can open

Each school's secret keys are **sealed in an envelope** that only that school's own key can open. Even a full copy of the database would just be a pile of sealed envelopes, useless to anyone who found it.

Sealed
per school, under its own key

0
times a saved secret is shown again

Verified
mail-server certificates

HOW IT PROTECTS YOUR SCHOOL

- **Encrypted before they're stored,** under a key specific to your school.
- **Never shown again** once saved, and never written to logs. The log only records which settings changed.
- **Messages come from you.** Email and SMS go out from your school's own accounts, so parents recognise the sender.
- **No borrowing:** once your school starts setting up its own mail, it never quietly sends through someone else's.
- **Your mail settings can't be used to attack us.** The mail server address is checked so it can't point inside the platform's own network.
- **Certificates checked:** connections to mail servers are verified, so messages can't be intercepted by an impostor server.
- **Short texts:** an SMS carries a short notice and never a child's results.

EXAMPLE

Your bursar leaves on bad terms. She saw the Paystack dashboard once, but she never saw your secret key in the portal, because after it was saved nobody could see it again. Only the School Admin can change it.

SECURITY 10

Safe in the browser and on shared devices

Parents use family phones. Students use school computers. Brightstars is careful about what it leaves behind, and about the tricks websites use against each other.

Think of it like this: A visitor who wipes their feet

On a shared computer, Brightstars behaves like a **polite visitor**. It uses one sign-in cookie, keeps no copies of private pages on the device, and carries no advertising trackers.

1
cookie, no trackers

0
outside scripts or ads

0
private pages kept on the device

HOW IT PROTECTS YOUR SCHOOL

- **Encrypted connection (HTTPS)** for everything sent between the device and the portal.
- **One cookie, no tracking:** a single signed sign-in cookie that scripts on the page can't read. No ads, no analytics and no third-party trackers, on any page.
- **Nothing loaded from outside:** the portal refuses to run scripts from other websites.
- **Can't be disguised inside another site.** The portal refuses to be embedded in someone else's page, which stops fake look-alike screens.
- **Forged clicks blocked.** Every form carries a secret token, so another website can't make your browser submit something in your name.
- **The app keeps nothing private on the phone.** The installed app stores only styles and fonts for speed, never pages you were signed in to.
- **A system update signs everyone out,** except candidates and students in the middle of an exam, who carry on undisturbed.

EXAMPLE

A parent checks her son's results on a cyber-café computer and forgets to sign out. The next customer presses Back. There's no stored copy of the results page for the browser to show, and the sign-in ends when the browser is closed.

SECURITY 11

Our team and your data

Trust also means being clear about what we, the platform provider, can and cannot do with your school's information.

Think of it like this: A visitors' book at your gate

When our support team needs to help inside your portal, they come through a **signed visitors' book**. Each visit uses a one-time pass that expires quickly, and every visit and every action is written into your school's own activity log under their name.

YOUR ACTIVITY LOG · SEARCH "PLATFORM"

12 Mar 10:02	platform@ops	Entered the school (one-time pass)
12 Mar 10:05	platform@ops	Updated school branding, as you asked
12 Mar 10:07	platform@ops	Signed out

1-time
entry passes for support visits

Both
sides record every visit

Never
sold or shared

HOW IT PROTECTS YOUR SCHOOL

- **You own your data.** Your school decides what is collected and why. We store and process it for you, and never sell it, share it with other schools or use it for anything else.
- **Support visits are recorded on both sides:** our own log, and your school's activity log, under names such as *platform@ops*.
- **One-time, short-lived entry passes.** Our staff can't simply sign in to your portal with a password.
- **Leavers are locked out everywhere at once.** When we remove a member of our team, their access to every school ends immediately.
- **Deleting a school is a separate, rarely granted power,** and a full export is normally taken first.
- **Pausing isn't deleting.** A suspended school's data is untouched, and it returns exactly as it was.
- **Your data, exportable:** a complete copy of your school's records and files can be produced on request.
- **Written to align with Nigeria's Data Protection Act 2023 and the NDPR,** with a published privacy statement linked from your sign-in page.

EXAMPLE

Your head teacher wonders whether Brightstars has been looking around. She opens the activity log and searches 'platform'. Every support visit is there, with the date, time and every action taken, which matches the support ticket she raised last month.

SECURITY 12

Built not to lose your work

Security also means your work is still there tomorrow. A lot of quiet engineering makes sure that power cuts, poor networks and double clicks don't cost you anything.

Think of it like this: A post office that keeps a copy

When the portal needs to send a receipt or a notice, it first writes it into a **logbook**, then sends it. If the power goes mid-send, the logbook still has it, and it's sent again later. Nothing just vanishes.

Retried
notices after a power cut

0
duplicates from a double click

Fresh
totals, worked out every time

HOW IT PROTECTS YOUR SCHOOL

- **Notices are queued and retried.** Receipts, report card alerts and timetable notices survive a restart and are retried rather than lost.
- **A failed message never undoes your work.** If an email fails, the payment is still recorded.
- **No duplicates from double clicks** on important forms, such as payments.
- **Exams survive restarts.** A candidate mid-paper carries on where they were.
- **Archive, never delete,** for students who leave. Marked work can't be deleted, and deleted unmarked work can be restored.
- **Totals that can't drift.** Results and report cards are always worked out fresh from the marks on record, so they always agree.
- **Checked imports:** spreadsheets are checked before anything is written, and re-running one never doubles records.

EXAMPLE

NEPA takes the power at the exact moment the bursar records a payment. When it returns, the payment is there, the receipt email is still waiting in the queue, and it goes out on the next attempt. The parent receives it, slightly late, but it arrives.

SECURITY 13 · QUESTIONS

What proprietors ask us about safety.

Can Brightstars staff see our school's records?

Only by entering your portal through a one-time, recorded entry pass, usually to help you with a support request. Every visit and every action appears in your own activity log.

What happens when a teacher leaves?

Suspend their account and their access ends that second, even on a device that was already signed in. Their past work stays on record with their name.

A parent lost their phone. What now?

Reset their password. Every device signed in with the old password is signed out immediately.

Could someone guess passwords?

Repeated wrong guesses are paused after eight tries in five minutes, and every account starts with a one-time password that must be changed.

Can another school ever see our data?

No. Your school has its own database and files, and sign-ins from one school are rejected at another.

Do you sell or share our data?

Never. We act only as your processor. Your school owns and controls its records.

Can we get all our data out?

Yes. A complete export of your database and files can be produced at any time.

Are there adverts or trackers on our portal?

None. No ads, no analytics and no third-party scripts, for anyone, on any page.

What if the internet drops during an exam?

Answers already saved stay saved, the candidate carries on where they were, and up to five minutes of lost time is given back.

Who can change where our fees are paid?

Only the School Admin. It's not a permission that can be given to anyone else, not even the Finance Manager.

Want to go deeper?

Our full privacy and data-protection statement is linked from every school's sign-in page, and we're happy to walk your board or IT adviser through it.
